This is a pdf version of the captioned country contents in the intracen web site of the International Trade Centre. This document was generated on 05.12.2014. For the latest information about ITC's work and the country, please refer to www.intracen.org © International Trade Centre 2014

ITC encourages the reprinting and translation of its publications to achieve wider dissemination. Short extracts of this document may be freely reproduced, with due acknowledgement of the source. Permission should be requested for more extensive reproduction or translation. A copy of the reprinted or translated material should be sent to ITC.
1. Country / Territory Brief

ITC aims to assist Lithuania in creating sustainable trade linkages with the developing world by sourcing good quality products from these growing export markets. This page contains trade performance and investment data as well as highly innovative trade flow trends and analysis specially developed by ITC. This country page also makes use of ITC’s LegaCarta tool, which offers a country-specific analysis of the global multi-lateral rules impacting cross-border trade. You can also find information relating to the organizations working in Lithuania dedicated to assisting Lithuanian importers of goods and services from the developing world as well as those organisations hoping to assist developing-country exporters who wish to sell their product or service in Lithuania.
2. People and Economy

2.1 People

- Leather products (US$ 265 m)

Source: ITC Trade Competitiveness Map

Note: The figures displayed on the bars correspond to the country’s global rankings among other countries that export the same category of products. The current index and change in market share is relative to the world country ranking for the sector under review. Only sectors with more than 100 million exports are considered.
4. Trade Strategy and Policy

4.1 Trade and Development Strategies
4.2 Domestic and Foreign Market Access

Overview: Trade Policy and Business Environment

<table>
<thead>
<tr>
<th>INDICATOR, UNITS</th>
<th>RANK/132</th>
<th>SCORE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domestic Market Access</td>
<td>The pillar assesses the level and complexity of a country’s tariff protection as a result of its trade policy. This component includes the effective trade-weighted average tariff applied by a country, the share of goods imported duty free and the complexity of the tariff regime, measured through tariff variance, the prevalence of tariff peaks and specific tariffs, and the number of distinct tariffs.</td>
<td>46</td>
</tr>
<tr>
<td>Foreign Market Access</td>
<td>The pillar assesses tariff barriers faced by a country’s exporters in destination markets. It includes the average tariffs faced by the country as well as the margin of preference in destination markets negotiated through bilateral or regional trade agreements or granted in the form of trade preferences.</td>
<td>97</td>
</tr>
<tr>
<td>Tariff rate (%)</td>
<td>This indicator is calculated as a trade-weighted average of all the applied tariff rates, including preferential rates that a country applies to the rest of the world. The weights are the trade patterns of the importing country’s reference group (2012 data). An applied tariff is a customs duty that is levied on imports of merchandise goods.</td>
<td>5</td>
</tr>
<tr>
<td>Complexity of tariffs, index 1-7 (best)</td>
<td>This indicator is calculated as the average of the following indicators: Tariff dispersion, Specific tariffs and Number of distinct tariffs. See description of each individual indicator for more details. Prior to averaging, values for each indicator were transformed to a 1–7 score, using the min-max method.</td>
<td>110</td>
</tr>
<tr>
<td>Tariffs dispersion (standard deviation)</td>
<td>This indicator reflects differences in tariffs across product categories in a country’s tariff structure. The variance is calculated across all the tariffs on imported merchandise goods, at the 6-digit level of the Harmonized Schedule.</td>
<td>55</td>
</tr>
<tr>
<td>Tariffs peaks (%)</td>
<td>This indicator is the ratio of the number of tariff lines exceeding three times the average domestic tariff (across all products) to the MFN (most-favoured nation) tariff schedule. The tariff schedule is equal to the total number of tariff lines for each country. These tariffs are revised on a yearly basis.</td>
<td>104</td>
</tr>
<tr>
<td>Specific tariffs (%)</td>
<td>This indicator is the ratio of the number of Harmonized System (HS) tariff lines, with at least one specific tariff, to the total number of HS tariff lines. A specific tariff is a tariff rate charged on fixed amount per quantity (as opposed to ad valorem)</td>
<td>107</td>
</tr>
<tr>
<td>Number of distinct tariffs</td>
<td>This indicator reflects the number of distinct tariff rates applied by a country to its imports across all sectors.</td>
<td>109</td>
</tr>
<tr>
<td>Share of duty-free imports (%)</td>
<td>Share of trade, excluding petroleum, that is imported free of tariff duties, taking into account MFN tariffs and preferential agreements. Tariff data is from 2013 or most recent year available and imports data is from 2012</td>
<td>42</td>
</tr>
<tr>
<td>Tariffs faced (%)</td>
<td>This indicator is calculated as the trade-weighted average of the applied tariff rates, including preferential rates that the rest of the world applies to each country. The weights are the trade patterns of the importing country’s reference group (2012 data). A tariff is a customs duty that is levied by the destination country on imports of merchandise goods</td>
<td>73</td>
</tr>
<tr>
<td>Index of margin of preference in destination markets, 0-100 (best)</td>
<td>This indicator measures the percentage by which particular imports from one country are subject to lower tariffs than the MFN rate. It is calculated as the average of two components: 1) the trade-weighted average difference between the MFN tariff and the most advantageous preferential duty (advantage score), and 2) the ratio of the advantage score to the trade-weighted average MFN tariff level. This allows capturing both the absolute and the relative margin of preference.</td>
<td>96</td>
</tr>
</tbody>
</table>
