Evaluation of

The Netherlands Trust Fund Programme - Phase II (NTF II)

Uganda and Bangladesh Projects

The Independent Evaluation Unit/SPPG

December, 2016
Acknowledgements

This outcome and impact evaluation was commissioned by the Management of the International Trade Centre (ITC) and the Netherlands Centre for the Promotion of Imports from Developing Countries (CBI), with a defined purpose of ascertaining the impact and outcomes of the NTF II projects in Bangladesh and Uganda, three years after completion.

A rapid impact assessment was deployed by the evaluation team in Uganda to generate reliable information on impact related to coffee producers, enterprises, government policy and national exports. As the Dutch-funded Pioneering Real-time Impact Monitoring and Evaluation (PRIME) is covering the ongoing NTF III project in Bangladesh, this evaluation used survey and case studies to examined the outcomes in Bangladesh.

The draft report was reviewed by the programme team, ITC management, CBI and national partners. The comments received from all parties are highly appreciated. Thanks are also due to other stakeholders, partners and project clients met by the evaluation team at ITC, and in Bangladesh and Uganda during the missions.

The evaluation was managed by Jicheng Zhang, Evaluation Officer, under the quality supervision of Miguel Jiménez Pont, Head of the Independent Evaluation Unit. The evaluation was supported by two evaluation consultants, Alex Nakajjo (Uganda) and Khondoker Haider (Bangladesh). The evaluation benefited from research support of Seung-ju Lee and Huiwen Li (Evaluation Interns). Juliana Knoll, Administrative Assistant of the Strategic Planning, Performance and Governance Section (SPPG), provided administrative support during the evaluation process.

</table>
Executive Summary

1. The 2016 Outcome and Impact Evaluation of the Netherlands Trust Fund Programme – Phase II (2010-2013, NTF II) was requested by the ITC Management and the funding partner – the Netherlands’ Centre for the Promotion of Imports from Developing Countries (CBI). The evaluation was designed to ascertain the impact and long-term results of the NTF II projects in Bangladesh and Uganda, three years after their completion, and provide learning and recommendations for future operations.

2. The NTF II Bangladesh project targeted the country’s fast growing IT and IT enabled-services sector (IT/ITES). With more than 400 companies in the sector and a wide pool of trained IT engineers, the Bangladeshi IT/ITES sector possessed great potential for export. However, there were multiple challenges faced by these companies, many of which are small, in exporting to EU and other foreign markets. One critical challenge was that many of these companies had no marketing or business experiences in serving international clients. Another major challenge was that the Bangladeshi TISIs in the sector were not prepared to provide business-to-business (B2B) matchmaking services. The objective of the project was to improve the exporter’s competitiveness in IT/ITES enterprises by establishing sustainable business relationships between Bangladeshi IT/ITES exporters and EU companies.

3. The intervention logic (results chain) was that, through a series of customized B2B match-making and client relationship building events supported by the project, the selected IT/ITES enterprises would be able to obtain initial business orders from EU clients. In the process of delivering those business orders, the IT/ITES companies would improve their business and international marketing capacities. Also supported with other project services, such as building Bangladesh’s outsourcing brand, the project partner TISI would be able to sustain and upgrade B2B match-making services, and the project companies would gradually secure larger orders and new clients in other foreign markets; these project companies would also serve as role models in the sector (i.e. the spillover effect).

4. The Uganda project aimed at better connecting small coffee producers to the international coffee value chain. The key challenge addressed by the project was to bring coffee production to a critical level in both quantity and quality, so that farmers could increase the volume and price of exported coffee. The existing supply chain in Uganda was characterized by several layers of players, rendering marginal returns to coffee farmers; this in turn affected the quality and export of Ugandan coffee. The objective of the project was to create sustainable exporter competitiveness in the coffee sector, through enhanced effectiveness of umbrella institutions and farmer organizations in accessing the EU market and by addressing value chain constraints, in particular those related to exports.

5. The intervention logic was surrounding the collective marketing model promoted by the National Union of Coffee Agribusinesses and Farm Enterprises (NUCAFE), a coordination body of coffee farmers associations. The main result chain was that the project provided support to NUCAFE with a focus on business capacity and an enhanced service portfolio
to coffee farmers, so that the farmers - as coffee producers and exporters - could sell in bulk through NUCAFE to the European markets. Another result chain was in policy advocacy, as the project supported the Uganda Export Promotion Board (UEPB) and the Uganda Coffee Development Authority (UCDA) in developing and implementing a national coffee export strategy, which would secure government commitment in supporting coffee producers and exporters in the long term.

6. **Evaluation approach.** Due to the difference in the sectors of intervention in the two countries (i.e. IT/IT-enabled services in Bangladesh, coffee in Uganda), the evaluation is composed of two sub-evaluations: one on the outcomes in Bangladesh in the IT/ITES sector, and the other on impact in Uganda in the coffee sector.

7. After consultations with ITC and CBI, a rapid impact assessment was deployed in Uganda to generate reliable information on impact related to coffee producers, enterprises, government policy and national exports. In the case of the Bangladesh project, the NTF III has been conducting a Pioneering Real-time Impact Monitoring and Evaluation Programme (PRIME) to monitor real-time impact on the same sector in 2015-2017. To avoid duplicating effort to assess impact, this evaluation focused on assessing the expected outcomes in line with the project design. Based on the rapid impact assessment and outcome analysis, the evaluation concluded that the NTF II Bangladesh and Uganda Projects have achieved significant results in terms of supporting sustainable export for small and medium enterprises (SMEs) in the IT/ITES sector in Bangladesh and for smallholder coffee producers and exporters in Uganda.

8. **Impact of Uganda project.** The sustainable impact generated by NTF II on the coffee sector in Uganda is significant. At coffee-producer level, the increased coffee yields, price, and household income are visible today three years after project closure, confirming sustained livelihoods. The impact survey sampled 398 coffee households and found that each beneficiary farming household has earned an average of USD1808 per year from coffee sales in the period 2011-2015, compared to an average of USD 683 by non-beneficiary farmers. The better income for beneficiaries is attributed to upgrading farming practices, enhancing coffee quality, collective marketing through NUCAFE, and the higher prices. Beneficiary farmers received relatively higher prices for coffee sales, both for processed and unprocessed coffee, compared to the non-beneficiary farmers. Based on the impact survey findings, the average premium to farmers was USD 397 per ton in 2015.

9. It should be noted that this achievement in coffee-generated incomes was happening in a challenging coffee growing scenario. In recent years, many Ugandan farmers lost coffee plants to the coffee wilt disease. There have been national replanting programmes financed by the Government, whereas coffee plants take three years to be productive. Without an increase in productivity and in price, household incomes would have been dropping in this scenario.

10. Another major impact is the increased exports. Coffee exports by NUCAFE, all supplied by coffee farmers associations, have increased by 204 per cent, from 190 tons in 2010 to 577 tons in 2015; in market value, from USD 0.30 million to USD 1.28 million. The EU remains
the main export destination of NUCAFE, and exports to EU have increased from 77 tons to 349 tons. This achievement was made in the context that the global coffee exports increased about 8 per cent from 2011 to 2015.\textsuperscript{1} The increase in export volume is largely attributed to the improved coffee quality (particularly related to training in 4C certification) and enhanced export marketing (including outbound missions and participation in international coffee fora).

11. NUCAFE’s collective marketing and farmer ownership model is innovative and effective in benefiting smallholder farmers. NUCAFE transfers price premiums directly to farmers, which is actually one of the critical success factors in increasing coffee producers’ household income. Another factor is the improved quality of coffee beans. Working with NUCAFE, more farmers are aware of coffee farming techniques and quality requirements, and the coffee hub set up by NUCAFE actually works as a first step quality assurance. This has enabled farmers to sell quality coffee beans in bulk.

12. In terms of advocating for policy change, under NTF II, initially a National Coffee Export Strategy was developed and launched by the Ugandan Export Promotion Board (UEPB)/the Ministry of Trade, however the export strategy was not embedded at the senior level of the relevant sector institutions such as UCDA under the Ministry of Agriculture Animal Industry and Fisheries. The turnaround happened three years after NTF II completion, in 2016 the Government endorsed a National Coffee Policy and National Coffee Development Strategy, which were prepared based on the policy paper delivered by NTF II and advocated by UCDA and NUFCAFE. The new strategy is now being earmarked with a concrete budget and supported with a strong political commitment.

13. Gender equality consideration was addressed in implementation by NUCAFE, although the initial NTF II project design did not have a specific component on gender. NUCAFE has made consistent efforts to ensure the participation of women beneficiaries in project activities. A gender equity manager has been recruited and the M&E has gender disaggregated data. Accordingly, all training and capacity building interventions included gender sensitization. NUCAFE in partnership with UCDA have held radio programmes educating farmers on the importance of gender equality and women’s empowerment among other coffee related issues. Field visits confirmed that women’s participation in decision making on coffee production has improved and participation in farmer association activities has reduced gender-based violence in coffee farmer households.

14. The outcomes observed resulting from the Bangladesh project are transformative: at the beginning of the project, doing business with the EU and other foreign clients was a daunting challenge for the small enterprises; three years after NTF II completion, multiple beneficiary companies recounted that the marketing techniques learned from NTF II (B2B events and training) allowed them to do marketing in other foreign markets, such as

\textsuperscript{1} International Coffee Organization, Global exports of all forms of coffee global, 104 435 thousand 60kg bags in 2011, increased to 112 722 in 2015, \url{http://www.ico.org/new_historical.asp}
Australia, Korea, Saudi Arabia and the US. They attributed today’s marketing capacity to their participation in NTF II.

15. NTF II had built a good base for the IT/ITES outsourcing companies to do marketing abroad. This is a result which was not observed upon the completion of the project. Back in 2013, the perception was that those B2B events brought in business information leads; however, it was very difficult to transform them into real business due to various challenges.

16. The Bangladesh project selected the IT/ITES sector for intervention, by considering the importance of improvement in technology-based non-agricultural exports and its contribution to sustained growth and poverty reduction. To address this need, the project effectively expanded ITC’s expertise and strength in an emerging sector with great potential to drive economic growth in developing countries.

17. There is also evidence on job creation. According to the survey, across 10 beneficiary companies the number of employees has increased from 605 in 2010 to 862 in 2013, and 59 permanent jobs and 44 temporary jobs were created directly by the Project. The sector’s contribution towards overall employment creation has not been significantly high when compared to traditional sectors; however it did create high quality jobs with satisfactory compensation.

18. As confirmed by all partners, Bangladesh Association of Software & Information Services’ (BASIS) capacity has improved significantly in the past years, especially in arranging B2B events and matchmaking. Although IT export is not yet making a significant part in the country’s export portfolio, BASIS and IT outsourcing companies are aspiring to make a bigger share in national exports.

19. In terms of synergy with CBI and other projects, during the NTF II period, the Bangladesh project manager and the country coordination played an active role in collaborating with CBI in various co-sponsored activities and sharing information with DANIDA. The complementary services of CBI and NTF II in supporting marketing and coaching are exemplary in these cases.

20. Regarding the programme governance structure, the 2013 evaluation of the NTF II Programme, which focused on assessing the operational model including the management structure of NTF II, commended the value of the governance structure and considered that the QA’s work was useful to support the governance structure and inform strategic decision making; it recommended to continue SG oversight while giving responsibility and demanding accountability to project managers.

21. The NTF II did give special attention to women-led IT companies during the selection process and a few were selected as beneficiary companies; a greater number of female participation in IT/ITES business is also being witnessed. Cultural boundary is often mentioned as a substantial challenge for women’s participation in the IT industry.

22. The NTF II Bangladesh project is considered as highly innovative. In the context of Bangladesh, the B2B concept was very innovative for encouraging IT/ITES sector exports. The bottom-up approach in helping the small IT/ITES companies to connect directly with
foreign buyers was an effective way to realize their export potential. It is often seen that development agencies try to intervene primarily at the policy level in developing countries expecting a trickle-down effect. NTF II ensured that the project directly served the end beneficiaries and their capacity to export. While undertaking the assignments supported by the project, the beneficiary companies were heavily engaged in providing innovative solutions to their foreign clients, and many of whom were first-time clients. Thereby, this project’s value of innovation was seen at all levels and is commendable.

Recommendations

Part I. Recommendations generated from the Uganda project

23. Based on analysis and findings of NTF II Uganda Project, one strategic recommendation is provided to CBI and ITC on proposing a strategic partnership with the Government in implementing the National Coffee Policy and Strategy in 2016-2020. The evaluation also provides a set of technical recommendations which could be relevant to similar operations of CBI and ITC in coffee sector either in Uganda or in other countries.

i. Strategic recommendation: propose a strategic partnership with the Government to support the implementation of national coffee policy and strategy 2016-2020

Responsible units for implementation: ITC’s Value added to Trade Programme and Office for Africa (OA)/Division of Country Programmes (DCP), and the counterpart at CBI

24. Partnership with the Government. Facing the great demand for international marketing support in coffee sector, the NTF programme, based on the strengths of CBI and ITC, is well positioned to offer continued and upgraded technical support, which should be implemented under a strategic partnership with the Government. This strategic partnership should focus on matching the demands of Government and the comparative advantage of CBI and ITC, so that the project efforts will be well integrated in the implementation of national development plan 2016-2020.

25. Scaling up collective marketing of coffee producers. The collective marketing approach led by NUCAFE was effective in increasing incomes of small producers, and it should be scaled up in broader regions. In the process of connecting Uganda with international coffee value chains, ITC’s continuous support is important for NUCAFE and small producers to secure a decent share in the value chain. In this regard, the value provided by ITC should continue focusing on addressing the demands of smallholder farmers, as experienced in NTF II, so that the improvement in household income could be prioritized and well monitored by the project, in line with ITC’s development goals and the Uganda national development plan.

Technical recommendations for similar operations in coffee sector in Uganda or in other countries

ii. Assess and enhance in-country coordination to ensure the commitment of partners in coffee export

26. To enhance the commitment of in-country partners, the future stakeholder analysis, during project appraisal and design stage, should consider the strategic fit of each key
implementation partner in a sector-wide export strategy. Accordingly, the in-country coordination arrangement should be reviewed during the implementation process, to ensure the coordination among key implementation partners is effective.

Responsible units for implementation: Value added to Trade Programme and DCP all Sections

iii. **Expand partnership with the private sector TISIs in the coffee value chain**

27. As experienced by NTF II, in value chain sector development, motivated private sector TISIs (like NUCAFE) have the strengths of close connection with small producers, be it national or local player in the sector. On the one hand, they not only provide traditional services (such as information and coaching) but also play an active role on their behalf (such as marketing and selling) and on the other hand, they also take particular care in the redistribution to small producers of the wealth generated through the development of the value chain. In promoting coffee export, the private sector TISIs often need external support in the areas of connecting to international value chains, policy advocacy, improving quality standards, and securing price premiums. Therefore, it is critical in project design to emphasize a strong partnership with motivated private sector TISIs.

Responsible units for implementation: Value added to Trade Programme and Project Design Taskforce/DCP

iv. **Replicating and scaling up collective marketing in coffee export with other partners**

28. There is significant space for promoting collective marketing among smallholder growers, which will necessitate a concrete replicating and scaling up plan through cooperation with government and private sector partners that work with smallholder producers in collective marketing. In this perspective, it is important to include a replicating and scaling up plan and related activities in the future project design, so that the benefits and approach demonstrated by the project could be replicated and scaled up by others.

Responsible units for implementation: Value added to Trade Programme and Project Design Taskforce/DCP

Part II. Recommendations generated from the NTF II Bangladesh project

29. Based on the analysis and findings of the NTF II Bangladesh project, the evaluation provides recommendations which could be relevant to future operations IT/ITES sector in Bangladesh or in another country.

Responsible units for implementation: DEI all Sections and Project Design Taskforce/DCP

v. **In a dynamic IT/ITES marketing environment, continue the decentralized decision making approach** where project managers have the responsibility to make necessary adjustment based on emerging trends, and set-up corrective and supporting measures for beneficiary companies to ensure effective participation. This sort of participation and accountability measures will ensure the relevance of ongoing activities and encourage improvement in the performance of the beneficiary companies.

vi. **Coordinate with other development partners active in the IT/ITES industry and establish focal points to ensure improved collaboration**
30. To ensure collaboration with major donors and partners and to avoid duplication of efforts, future projects should coordinate closely with and complement a number of other on-going donor-funded activities in the sector. Also while undertaking the project appraisal and consequently when preparing the annual work plan, the project management should identify the areas of collaboration and partnership.

vii. **Recognize the diversity among the beneficiary companies and provide customized solutions to a cluster of companies**

31. In clustering the clients, TSIs should be encouraged to undertake regular assessment to ensure that the project solutions are aligned and well integrated with the national strategy, such as the Digital Bangladesh initiative.

viii. **Design project components or events specifically for women entrepreneurs** and institutionalize a platform in which they are able to discuss challenges faced in IT/ITES sector and to collectively voice out their opinions

32. As seen the improved gender mainstreaming in NTF III design, future projects should consider providing recognitions to women who have shown exemplary performance in the IT/ITES sector and showcase their achievements at the national and international level.

</tr>
<tr>
<td>The collective marketing approach led by NUCAFE was effective in promoting coffee export and generating incomes for smallholder farmers. However, NUCAFE covers only about 1 per cent of the coffee growers in the country. In 2016, the Government renewed a firm commitment to transform the coffee sector, which is a part of the National Development Plan. In line with the government plan, coffee production in Uganda will increase dramatically: from the current 3.5 million bags to 20 million bags over the next five years (2016-20). The Government has committed to increase funding to the sector from ugx 37b in 2015/16 to ugx 77b in 2016/17, and this will be sustained in the medium term. Facing the upcoming production surge, the Government, exporters and coffee producers are in great need of support for international marketing and branding, work areas where ITC has comparative advantage among international organizations. (para. 132-134)</td>
<td>Coffee trade holds great potential for poverty reduction in Uganda. Poverty is still a persistent challenge: as of 2014, about 63 per cent of Ugandans were either poor (20 per cent living below the national poverty line USD 1 per day) or vulnerable to poverty (43 per cent barely passed the poverty line), according to UNDP 2014 national poverty report. Among these, the poorest include the 8 million smallholder farmers scattered throughout the country. The observed results of NTF II in supporting the coffee sector have been significant among the smallholder farmers; coffee plantation is becoming a major income source for rural households. Typically, farmers grow mixed crops, and often there is visible contrast between the commercial farming of coffee plantation (for income generation) and the rain-fed farming of other crops (for food consumption). A continued coffee project will make a difference. (para. 31.</td>

Analysis of the conclusions (role of partners, project, context, etc.)

Recommendations (from the Executive Summary)

addressing the demands of smallholder farmers, as experienced in NTF II, so that the improvement in household income could be prioritized and well monitored by the project, in line with ITC’s development goals and the Uganda national development plan.

Technical recommendations for similar operations in coffee sector in Uganda or in other countries

Responsible units for implementation of Recommendation II: Value added to Trade Programme and DCP all Sections

The project coordination with UEPB was sub-optimal. The coffee export strategy prepared by NTF II was launched in 2013; however it was not implemented due to the conflicting mandates between UCDA (under the Ministry of Agriculture Animal Industry and Fisheries) and UEPB (under the Ministry of Trade). Following the completion of the NTF II, UCDA and NUCAFE have been advocating for a farmer-oriented government policy for coffee sector, which resulted the 2016 Coffee Strategy and Policy, adopted by the government. (para. 44, 62)

For the coffee sector export, the project indicated UEPB as a partner institution for policy development and capacity building. UEPB as a general trade support organization had limited engagement in the coffee sector, beyond facilitation of the export strategy design; and UEPB considered the project interventions in the coffee sector to be limited to small portion of their mandate. The conflicting mandates of UEPB and UCDA constrained the feasibility to review and implement the coffee sector export strategy. (para. 36, 37)

II. Assess and enhance in-country coordination to ensure the commitment of partners in coffee export

- To enhance the commitment of in-country partners, the future stakeholder analysis, during project appraisal and design stage, should consider the strategic fit of each key implementation partner in a sector-wide export strategy. Accordingly, the in-country coordination arrangement should be reviewed during the implementation process, to ensure the coordination among key implementation partners is effective.

Responsible units for implementation of Recommendations III and IV: Value added to Trade Programme and Project Design Taskforce/ DCP

NTF II project benefited from the growing capacity and strong motivation of NUCAFE in

The success of the project was largely anchored in the successful growth of NUCAFE’s

III. Expand partnership with the private sector TISIs in the coffee value chain

- As experienced by NTF II, in
organizing coffee production and marketing. The services and dynamics brought in the project by NUCAFE reflected the strengths and interests of a private sector TISI who had close connection with small producers. Besides, the cooperation between NUCAFE and its member farmer associations had been effective in improving quality and expanding sales. Also, UNCAFE had been active in policy advocacy on behalf of coffee producers. (para. 62, 63)

The evaluation found that NTF II trainings indeed enhanced the appreciation by farmers of the collective marketing approach. The training and support under NTF II improved farmer’s IV.

As experienced by the NTF II Uganda project, the collective marketing model managed by a private sector TISI (NUCAFE) was effective in upgrading coffee production, increasing export and The evaluation found that NTF II trainings indeed enhanced the appreciation by farmers of the collective marketing approach. The training and support under NTF II improved farmer’s IV. Replicating and scaling up collective marketing in coffee export with other partners
- There is significant space for promoting collective
## Findings and conclusions

Generating income for smallholder farmers. With better quality and production, project farmers were able to access higher prices, even in cases without selling through NUCAFE. (para 48, 74-76)

## Analysis of the conclusions (role of partners, project, context, etc.)

Awareness of coffee quality and export requirements. This had enabled small producers to export in bulk through NUCAFE to buyers from Europe like Café Riva from Italy and other countries. This partly explains the higher income earned from coffee compared to non-beneficiary farmers. (para 48, 49)

## Recommendations (from the Executive Summary)

Marketing among smallholder growers, which will necessitate a concrete replicating and scaling up plan through cooperation with government and private sector partners that work with smallholder producers in collective marketing. In this perspective, it is important to include a replicating and scaling up plan and related activities in the future project design, so that the benefits and approach demonstrated by the project could be replicated and scaled up by others.

### Recommendations generated from the NTF II Bangladesh project

Based on the analysis and findings of the NTF II Bangladesh project, the evaluation provides recommendations which could be relevant to future operations IT/ITES sector in Bangladesh or in another country.

**Responsible units for implementation of Recommendations V, VI, VII and VIII: DEI all Sections and Project Design Taskforce/DCP**

| Necessary adjustments were made by the project management in a timely manner to ensure the ongoing project activities were relevant to the emerging situations both in the supply and demand sides. The project benefited from its flexibility in operational decisions due to the responsibility given to the Project Coordination Group to decide on operational adjustments throughout project duration, with the approval of the Programme Management and with regular reporting to the | The flexibility brought about by decentralized decision making allowed the Project to adapt to the changing market environment. The IT/ITES industry has a very dynamic business environment where the demand patterns change fast. At the time of appraisal, the UK was considered as a key export destination market, but after organizing a few events it seemed that there was not much traction for the beneficiary companies. As a result, the project manager | In a dynamic IT/ITES marketing environment, continue the decentralized decision making approach where project managers have the responsibility to make necessary adjustment based on emerging trends, and set-up corrective and supporting measures for beneficiary companies to ensure effective participation.

- This sort of participation and |

<tr>
<td>Project Steering Group. (para. 83, 95)</td>
<td>made the decision to change focus from UK market to German market. Another operational change is that, among the 40 enterprises initially selected by NTF II, 8 companies were removed and replaced, due to lack of active participation, with newly selected companies who met the selection criteria. By undertaking this strict action, the Project succeeded in creating a stimulating effect among beneficiary companies. (para. 24, 83)</td>
<td>accountability measures will ensure the relevance of ongoing activities and encourage improvement in the performance of the beneficiary companies.</td>
</tr>
<tr>
<td>During the NTF II implementation, there were no other sector development projects under implementation. Hence, there were very limited opportunities to develop further partnerships beyond CBI and DANIDA. NTF III has enhanced collaboration with other agencies. (para. 98.)</td>
<td>Synergy building with other major development partners working in the sector was expected by CBI and ITC, as expressed in the NTF Programme document. During the NTF II period, the Bangladesh project manager and the country coordination played an active role in collaborating with CBI and sharing information with DANIDA. Synergy building was significantly emphasized by NTF III, largely because the context had changed. A large World Bank lending project had been put in place to support the development of the ITC industry, followed by an Asian Development Bank funded-project aimed at building the capacity of the industry. Coordinating with the new donors had become a priority.</td>
<td>VI. Coordinate with other development partners active in the IT/ITES industry and establish focal points to ensure improved collaboration - To ensure collaboration with major donors and partners and to avoid duplication of efforts, future projects should coordinate closely with and complement a number of other on-going donor-funded activities in the sector. Also while undertaking the project appraisal and consequently when preparing the annual work plan, the project management should identify the areas of collaboration and partnership.</td>

| The NTF II did give special attention to women-led IT companies. According to the      | During the selection of beneficiary companies, a particular attention was given to companies with women leadership and companies that adopted female-sensitive and family-acceptance work environment for its employees. Under NTF III, the women’s empowerment component is further strengthened. A good reference is the establishment of Women’s Forum by BASIS in 2015. The Forum’s objective was to boost the role of women and to expand their reach to IT-related fields, as well as younger women currently working towards IT-related degrees. (para. 111, 113) | VIII. Design project components or events specifically for women entrepreneurs and institutionalize a platform in which they are able to discuss challenges faced in IT/ITES sector and to collectively voice out their opinions  
- As seen the improved gender mainstreaming in NTF III design, future projects should consider providing recognitions to women who have shown exemplary performance in the IT/ITES sector and showcase their achievements at the national and international level. |
| evaluation survey, beneficiary companies reported some positive contribution by the      |                                                                                                                                    |                                                                                                             |
| project. The total number of female employees in the sample beneficiary companies increased from 61 to 159 and about 40 new female employees were hired as direct outcome of NTF II. This not only contributed in increasing the role of women in IT/ITES sector, but also gave visibility to successful women in the industry, so that they can become role models. Cultural boundary is often mentioned as a substantial challenge for women’s participation in IT industry. (para 111-112) |                                                                                                                                    |
Main report

I. Background to the evaluation

1. This is the second evaluation for the Netherlands Trust Fund Programme – Phase II (NTF II), which was implemented by the Division of Market Development, ITC (DMD) from April 2009 to March 2013. Upon the completion of the Programme, an evaluation was conducted in 2013 with focus on assessing accountability and governance/management; this defined evaluation scope was requested by the programme management and the donor, the Netherlands’ Centre for the Promotion of Imports from Developing Countries (CBI); it was anticipated to follow with another evaluation to “focus on impact issues”.

2. In this background, the second evaluation, with focus on outcome and impact, was conducted in 2016. In line with the evaluation terms of reference, it assessed mainly the outcomes, and where feasible, the impact of the programme. Where feasible, the associated synergies with the work of CBI should be considered as well. This evaluation did not include assessment of accountability and management, which had been addressed by the previous evaluation. The evaluation findings and recommendations will be informing the ongoing implementation of NTF III (2014-2017) and the consideration for the next phase.

3. The evaluation objectives and scope took full consideration of the requests and expectations of CBI, ITC management and DMD. Through the Steering Group telephone conference held in September 2015, CBI stressed the importance for the evaluation to cover results related to all three levels of producers, enterprises and the TSIs. As agreed with CBI and ITC, the purposes of the evaluation were to:

   (i) Assess the outcomes and, if feasible, impact of the NTF II;
   (ii) Generate recommendations for the on-going implementation of NTF III (2014-2017) and the consideration for the next phase; and
   (iii) Share insights on the associated synergies with the work of CBI.

4. The evaluation mainly covered operations in Bangladesh and Uganda. The Programme Steering Group selected Uganda and Bangladesh, among five project countries, for in-depth evaluation, based on the broad scope of interventions in these two countries and the fact that the work has continued under NTF III, thereby maintaining the sector focus and building upon the results achieved. The evaluation endorsed the Steering Group’s selection in defining the evaluation scope, mainly based on considerations of potential value for learning and utility in future operations.

5. Due to the difference in intervention sectors in different countries (i.e. IT/IT-enabled services in Bangladesh, coffee in Uganda), the evaluation is actually composed of two sub-evaluations: one for intervention in Bangladesh in IT/ITES sector, the other for

---

2 In the other three project countries, South Africa, Kenya and Senegal, the project team would produce a project closure report for each.
intervention in Uganda in coffee sector. In Bangladesh, the evaluation aimed at assessing the outcomes related to the individual IT/ITES enterprises and on the trade support institutions (TSIs) worked with. In Uganda, the evaluation was designed to ascertain the impact on the individual coffee producers, on the cluster of producers worked with, and on the capacity building of TSIs (NUCAFE and UCDA).³

6. **Evaluation Methodology** In line with ITC’s Evaluation Policy 2015 and the current practice of UN entities on independent evaluations, the evaluation applied the evaluation criteria of: relevance, effectiveness, efficiency, impact, women’s empowerment and gender equality, sustainability, innovation, and other considerations. A six point rating system is applied for each evaluation criterion to indicate the level of performance. A detailed description of the rating system and the evaluation criteria is seen in Annex V.

7. In terms of assessing project results up to 2016, the evaluation approach varied for the two projects. In the case of the Bangladesh project, the NTF III has been conducting a Pioneering Real-time Impact Monitoring and Evaluation Programme (PRIME) to monitor real-time impact on the same sector in 2015-2017; to avoid duplication in evaluation scope, this evaluation defined the results analysis on assessing the expected outcomes of the project in line with the project design. In the case of the Uganda project, which is not covered by the PRIME, a rapid impact assessment was deployed to ascertain the long term results on coffee producers, exports, TSIs, and government policies.

8. An evaluation matrix was developed for each project, and key questions in relation to each evaluation criterion were prepared, as seen in inception reports. To address the essential questions, the following methods were used for data collection and analysis:

   (i) Document review of the programme and project documents, national statistics, government development strategy and policy, related communications, events feedback, mission briefs, ITC policy and strategy documents, etc.
   (ii) Interviews with stakeholders, project clients, TSIs, government agencies, others.
   (iii) Review of macro data related to coffee sector in Uganda and IT/ITES export in Bangladesh
   (iv) Client survey: an impact survey in Uganda among 398 coffee farmers, and a beneficiary survey in Bangladesh among 10 selected enterprises
   (v) Statistical analysis of survey results and aggregation
   (vi) Triangulation of data from different sources
   (vii) Case studies to illustrate a results chain or impact pathway
   (viii) Other methods

9. **Impact design.** In the Uganda evaluation, to determine the long term impact on producers and on the coffee export sector, a mixed evaluation design was deployed, which entailed adopting a before-and-after comparison design, a with-and-without

³ The programme management considered that, given UCDA is the main TSI in the sector, the role of UEPB, the more general TPO, was always limited in the NTF II.
comparison design, and one-shot study design. This rapid impact design allowed the evaluation to compare today’s results with the baseline and to compare results for beneficiaries with that of non-beneficiaries. The detailed designs are described Annex II: Impact assessment design and sampling methods.

10. **Sampling methods** In Uganda, the fieldwork to collect data from coffee farmer households was conducted in all the coffee growing regions in Uganda, from randomly selected beneficiary coffee farmers including Central, South Western, West Nile and Eastern Uganda. A two-stage stratified sampling method was used in sampling coffee farmers and farmers associations. First, farmers associations in all the four coffee growing regions were targeted and 3 associations per region were sampled. For the second stage, 33/34 individual coffee farmers (farmer association members) from each selected farmer association were randomly selected. A total sample of 398 coffee farmer respondents was selected to participate in the evaluation. The details of sampling techniques and process are seen in Annex II.

11. In Bangladesh, a total of ten beneficiary companies were sampled. They were selected to bring about a representative sample of the 40 companies that participated under NTF II. The sample was created by taking into consideration the factors of: business type (sub-sector), size, and participation in events. Particular attention was given to companies that had female members in the management and/or a significant number of female employees.

12. The **evaluation process** started in February 2016 with the preparation of the evaluation terms of reference and recruitment of consultants. The field visits and surveys in two countries were conducted between April and June 2016, followed by data analysis and report drafting in July and August. The initial draft report was delivered in September for comments and review; related learning, communication, and follow up actions will ensue.

---

4 The evaluation team included two experienced evaluation consultants: Alex Nakajjo, based in Uganda, and Khondoker Haider, based in Bangladesh.
II. Background to the NTF II Programme and projects in Bangladesh and Uganda

NTF II Programme design

13. The NTF partnership between ITC and CBI, driven by the synergies between the two organisations, was initiated in 2005. The partnership was built on their common mission to contribute to trade-led development by strengthening the competitiveness of firms in developing countries and promoting their participation in international trade. NTF I funded by the Netherlands Ministry of Foreign Affairs through the CBI was implemented over the period 2005-2008. The NTF II (2009-2013) was a successor programme of the NTF I, implemented in five partner countries, namely: Bangladesh, Kenya, Senegal, South Africa, and Uganda. Based on lessons learnt from the first phase, the NTF II programme focused on three thematic issues:

(i) Selecting priority sectors with the aim to improve the weak links along the value chain.

(ii) Enhancing the capacity of selected support organisations to provide more effective services and to implement rigorous monitoring mechanisms to help them measure the impact of their work.

(iii) Limiting the number of beneficiary countries to ensure significant and in-depth intervention for each selected sector/organisations.

14. The overall objective of the NTF II programme was “the creation of sustainable exporter competitiveness in selected potential export sectors and selected CBI partner countries”. It was expected that the programme would enhance support institutions’ ability for sector development so that they acquire the sustainable capacity to work on export development across the complete value chain of the sectors identified as being internationally competitive.

15. Programme governance structure.⁵ Referring to the 2013 Evaluation of the NTF II Programme, which focused on assessing the operational model including the management structure, the Programme was managed by two governance structures: the Steering Group (SG), main decision-making body in relation to operations and supported by a Quality Advisor (QA), and the Executive Committee, ITC and CBI’s highest executives, providing strategic direction and guidance. The 2013 evaluation commended the value of the governance structure and recommended to continue SG oversight while giving responsibility and demanding accountability to project managers.⁶

16. As assessed by the 2013 evaluation, CBI, taking lessons from NTF I, became more involved during the NTF II design phase. Its representatives participated in preliminary

---

⁵ The assessment on the programme management and governance was one of the focus areas addressed by the 2013 Evaluation of the NTF II Programme. To avoid repetition on assessing management and governance, the 2016 Outcome and Impact Evaluation refers to the same findings in the 2013 Evaluation.

⁶ The SG was composed of the Deputy Managing Director of CBI and Director Division of Market Development. Additional people that regularly attended the SG meeting were: the CBI Special Advisor, the ITC Chief Sector Competitiveness and the NTF II Programme Manager, who presented progress of the programme and any issue to be reviewed and resolved by the SG.
missions and were informed of the details of design processes, to guarantee the programme’s coherence—which led to the adoption of the three phase approach, namely identification, feasibility and formulation. Once the implementation started, CBI took an oversight role and ITC was taking the lead on implementation.

17. The main way, amongst others, through which CBI and ITC cooperated was through the SG. Progress reports, annual work plans and quality advisor reports informed the members of the SG. Judging by the meeting minutes provided, the SG maintained a very flexible management approach, with regular meetings every six months and ad-hoc meetings and discussions when needed. They reviewed and approved the annual work plans and annual consolidated progress reports, and requested and reviewed additional documents and position papers to facilitate decision making on adjustments and changes.

18. The 2013 evaluation considered that the QA’s work was useful to support the governance structure and inform strategic decision making, although the QA reports came in somewhat late in the implementation process. This is partly due to the fact that the implementation span was limited (they came in the middle of the implementation).

**NTF II Bangladesh Project**

19. **Rationale for intervention.** The Bangladesh project targeted the country’s fast growing IT/ITES sector. With more than 400 IT/ITES companies actively working in a large range of sub-sectors and a wide pool of trained engineers, Bangladeshi IT/ITES sector was cost competitive and possessed great potential for export. However, there were multiple challenges faced by Bangladeshi IT/ITES companies, many of them were small companies, in exporting to EU and other foreign markets.

20. The challenges were multifaceted. At enterprise level, limited size and lack of international track record made it difficult for most companies, either already engaging in export or possessing the potential, to attract and serve larger international clients, while cultural barriers and lack of familiarity with foreign market set another obstacle for these companies to approach their foreign counterparts.

21. For TSIs, Bangladeshi IT associations were not prepared to provide a result-oriented Business-to-Business (B2B) matchmaking service to its members, and the absence of a quality-controlled and well-promoted platform showcasing Bangladeshi companies restricted opportunities for market entry. Also, Bangladeshi IT/ITES sector suffered from poor international visibility and lacked the branding necessary for an emerging global offshoring destination. In general, all these challenges had undermined the competitiveness of Bangladesh’s IT/ITES industry.

22. The **objective** of the project was to improve the exporter’s competitiveness of Bangladesh’s IT/ITES enterprises by establishing sustainable business relationships between Bangladeshi IT exporters and EU companies. The project sought to attain three outcomes, namely:

(i) Build commercial relationships between Bangladeshi companies (suppliers) and European clients. This was to be realized through commissioning market research,
marketing the Bangladeshi IT/ITES offering in selected countries (PR, marketing, organizing local events), and organizing match-making between Bangladesh and EU companies.

(ii) Develop TSIs’ capacity to provide B2B linkages by designing and marketing business linkage as a core part of TSI mandate.

(iii) Improve the image of Bangladesh as a destination for IT/ITES outsourcing. This was to be realized through developing and implementing an IT & ITES outsourcing brand.

23. The intervention logic (results chain) was that, through a series of customized B2B match-making and client relationship building events supported by the project, the selected IT/ITES enterprises would be able to obtain initial business orders from EU clients. In the process of delivering those business orders, the IT/ITES companies would improve their business and international marketing capacities. Also supported with other project services, such as building Bangladeshi’s outsourcing brand, the project partner TISI would be able to sustain and upgrade B2B match-making services, and the project companies would gradually secure larger orders and new clients in other foreign markets; these project companies would also serve as role models in the sector (i.e. the spillover effect).

24. The major assumption in project design was that business contacts would lead to business transactions, and successful business transactions were likely to lead to sustainable business relationships. In addition, the B2B linkage service provided by TSIs could facilitate viable business contacts, increasing the likelihood of transferring business contacts to business transactions, while better branding and marketing Bangladeshi IT/ITES sector.

25. **Implementation.** After a careful selection, 40 companies were included in the project as beneficiaries, and the project facilitated building business contacts between them and EU buyers through matchmaking events and small B2B sessions. The enterprises were also coached by experts on export marketing, which improved their knowledge of foreign markets.

26. The partner TSIs, Bangladesh Association of Software & Information Services (BASIS) and Dhaka Chamber of Commerce and Industry (DCCI), were supported to establish and sustain their capability to provide a demand-driven matchmaking and B2B linkage services. Efforts were also made to create a strategic framework for branding, jointly with BASIS and DCCI. Promotion was done in targeted markets, and attention of media and consultancies specialized in IT outsourcing were sought.

27. In the end, the project reported that 192 new business contacts were built, the capacity of TSIs to provide B2B linkage service to its members was built and sustained, the Online Directory was launched by DCCI and BASIS, and the international visibility of Bangladesh IT/ITES sector had been increased by various promotion efforts.

---

7 The project team worked with BASIS in identifying and selecting participants.
Changes in implementation. During the implementation, the approach evolved in two ways. First, the project replaced 8 beneficiary companies, which were not actively participating, with newly selected companies. Second, as a result of limited business linkages in the UK, Germany was included into the targeted export market.

NTF II Uganda Project

The objective of the Uganda Project was to create sustainable exporter competitiveness in the coffee sector in Uganda, through enhanced effectiveness of umbrella institutions and farmer organisations in accessing the EU market and by addressing value chain constraints, in particular those related to exports. The project sought to attain three outcomes, namely:

1) Outcome 1: Umbrella institutions are enhanced in their capacity to undertake M&E, to lead the mid-term update and review the NES (coffee sector), and to manage the implementation of the national export strategy (NES) Plan of Action;

2) Outcome 2: NUCAFE and UEPB are enhanced in their capacity to ensure the competitive development and the export promotion of coffee production. This focused on building the Institutional capacity and internal systems to strengthen institutional development strategy and operational capacities, and developing an enhanced service portfolio of NUCAFE;

3) Outcome 3: Enhanced business capabilities of FAs to assist producers and exporters to take advantage of opportunities in the European market. The project was designed to support improvement in knowledge and skills in coffee marketing, implementation of traceability and certification schemes and development of market linkages for coffee exports. The project was also designed to improve access to finance for coffee sector value chain actors.

Rationale of intervention. The intervention logic was surrounding the collective marketing model promoted by the NUCAFE, a coordination body of coffee farmers associations. The main result chain was that the project provided support to NUCAFE with focus on business capacity and an enhanced service portfolio to coffee farmers, so that the farmers - as coffee producers and exporters - could sell through NUCAFE’s in large bulk to the European markets. Another result chain was on policy advocacy, as the project supported the UEPB and the UCDA in developing and implementing a national coffee export strategy, which would secure government commitment in supporting coffee producers and exporters in long term.

The key challenge addressed by the project was to bring coffee production to a critical level in both quantity and quality, so that farmers could participate more actively in the supply chain and increase their volume of exported coffee. The supply chain of coffee was characterized by several players, rendering the returns to the farmers’ small with limited incentives to adhere to quality requirements. These in turn affected the export of the Uganda coffee.

Evaluation note: the project document, log frame and RBM all specify NUCAFE and UEPB in outcome 2. Though, most capacity building activities targeted NUCAFE and UCDA
32. To boost coffee export, the project addressed shortcomings at production, post-harvest and marketing stages. The project also supported access to inputs and credit by coffee producers through training of FAs and their members on how to approach banks and on how to improve the management of farms as a business.

33. The project emphasized knowledge dissemination and capacity building for NUCAFE, its member farmers associations (FAs) as well as UCDA and UEPB, on international marketing and compliance with recognized certification/verification schemes and monitoring and evaluation tools. Accordingly, the project facilitated business linkages and transactions through matchmaking between Ugandan producers/exporters and foreign importers.

34. The project also intended to build the capacity of TSIs that would in turn improve the policy environment and build the capacity of farmer organisations. The trained farmer organisations would then lead efforts of building the capacity of the individual coffee farmers to increase the quantity and quality of coffee production. A results chain of the project is seen in Annex II.
III. Evaluation analysis and findings: Uganda Project

Relevance

Relevance to ITC’s development goals

35. The project interventions aimed at connecting smallholder coffee farmers into the value chain by supporting them produce quality coffee and market collectively through TSIs with international buyers. In line with ITC’s comparative advantage in supporting TSIs and SMEs, the project design centered on building the capacity of TSIs and coffee farmers associations in improving coffee quality and connecting with European and other international buyers. The project effectively contributed to enhancing the capacity of TSIs in terms of supporting the export process, expanding markets, and enhancing the competitiveness through enrolling to 4C certification scheme and traceability. The project contributed to increased coffee exports from Uganda and improved income of smallholder farmers in project areas. The project design is well aligned to ITC’s goal of “improved international competitiveness of SMEs in developing countries and transition economies for inclusive and sustainable development”, which is also in line with the UN MDG 1(pre 2015): eradicate extreme hunger and poverty.  

Relevance to Uganda development strategy and the needs of beneficiaries

36. The support under the project contributed to achieving key Government development goals. The first National Development Plan (NDP I) 2010-2014 and the current NDP II 2015-2019 prioritize an increase in exports with an emphasis on coffee, the leading commodity export for the country and contributing to the livelihood of about 1.7 million households. The National Export Strategy (2008-2012) and newly released National Export Development Strategy 2016-2020 also prioritized coffee export.

37. The relevance to the needs of coffee farmers is evident. As acknowledged by coffee farmers and their associations, the project addressed some of the outstanding business needs of coffee farmers. These included, among others, knowledge on agronomic practices, knowledge on coffee quality including post-harvest handling, access to primary process equipment, and access to markets with better prices.

38. NUCAFE trained farmers associations in quality management, agricultural practices, post-harvest handling, gender equity, coffee capping/flavor testing, coffee establishment, record keeping, primary processing of coffee and 4C. Through these trainings, production and sales of coffee increased, and more income was obtained.

Rating for relevance: 5 satisfactory

---

9 Evaluation note: the relevance is valid in today’s operations in relation to SDG 1: end poverty in all its forms everywhere.

10 In line with ITC’s Evaluation Policy and Guidelines, ITC applies a 6-point rating system in evaluations: 6 Highly satisfactory; 5 Satisfactory; 4 Moderately satisfactory; 3 Moderately unsatisfactory; 2 Unsatisfactory; and 1 Highly Unsatisfactory.
Effectiveness

Objective 1: umbrella institutions are enhanced in their capacity to undertake M&E, to lead the mid-term update and review the NES (coffee sector), and to manage the implementation of the NES Plan of Action.

39. The achievement of this objective is mainly related to the M&E capacity building of NUCAFE and UCDA, given that their mandates are entirely on the coffee sector. The M&E Capacity for UCDA and NUCAFE were enhanced significantly. M&E units have been established within both agencies with fulltime staff, work plan, and budget. The M&E capacity of NUCAFE is demonstrated in its constant use of M&E information for management decision making and for advocating policy change, together with UCDA. At UCDA, a dedicated M&E unit was created in May 2015 following the appreciation of the M&E function by management during trainings in NTF II. Weekly and quarterly briefs are prepared and presented during top management meetings.

40. Whereas the expected outcome II indicated UEPB as a partner institution for capacity building, UEPB, being a general TSO, had limited engagement beyond facilitation of the export strategy design and coordinating the CTAP training. The Evaluation found no indication that UEPB was prioritizing M&E capacity building, beyond UEPB staff attending M&E training. UEPB considered the project interventions to be limited to small portion of their mandate. 11

41. In terms of the expected update and review of the National Export Strategy (NES) for coffee sector, UCDA and NUCAFE led the development of the coffee export strategy, while UEPB played an advisory role, especially ensuring that the coffee export strategy is aligned to the national export strategy. The NES was launched by the Minister of Trade in 2013. Implementation of the coffee export strategy was mandated to UCDA, and UEPB’s role was monitoring or following up on the implementation of the coffee export strategy. However, the NES was not formally implemented, partly because of conflicting mandates between UCDA and UEPB. It should be noted that the elements of the draft NES were later incorporated in the National Coffee Strategy championed by UCDA; the NES process also prepared NUCAFE and UCDA to engage in policy advocacy.

Objective 2: NUCAFE and UEPB are enhanced in their capacity to ensure the competitive development and the export promotion of coffee production

42. There is indication of improved institutional capacity of NUCAFE. The NTF II supported NUCAFE in conducting an institutional audit, preparing a business plan, developing competencies and skills of field staff in business advisory services, reviewing and improving the portfolio of services offered by NUCAFE. The recent organizational and business development of NUCAFE has shown its enhanced capacity in providing service in production, quality processing, and export to farmers associations and smallholder farmers.

---

11 Project management note: UEPB was not a sector organization, so there was no reason “to expect” high engagement beyond facilitation of the process of strategy design and formulation.
43. The profile, visibility and position of NUCAFE, in collaboration with UCDA and UEPB, have improved significantly in the coffee sector. This has resulted into incorporation of NUCAFE aspirations into the national coffee policy and coffee sector export strategy and more opportunities for coffee farmers and competitiveness along the supply chain.

44. With support of NTF II, UCDA has developed an agribusiness manual which has empowered UCDA staff with five modules: (i) farming as a business, (ii) input and output markets, (iii) export dynamics, (iv) procedures to export, and (v) governance of farmer organizations. Most of the trained staff in NUCAFE and UCDA are still employed with them.

45. UEPB’s engagement under the NTF II project was mainly with supporting review of the Coffee Export Strategy and the Certified Trade Advisers Programme (CTAP) training, including selection of participants and actual facilitation of the training programme. A total of 30 participants attended the training and about 70 per cent of the trainees were certified. UEPB was able to apply the skills acquired under the CTAP and Business management systems training programmes in other sectors including vegetables. However, most people trained at UEPB have since left the organization.12

**Objective 3: enhanced business capabilities of FAs to assist producers and exporters to take advantage of opportunities in the European market**

46. The NTF II project provided capacity building in coffee marketing and export improvement and access to finance for FAs. Close to all expected outputs were achieved, and the impact has started to emerge with 4C certified farmers associations starting to export. According to project document, 8 importers are procuring coffee from NUCAFE, of which two are EU based, benefiting 80 FAs that are exporting through NUCAFE. A list of project outputs is seen in the table below.

12 Project management note: UEPB is not a working partner in NTF III.
Enhancing the financial management competencies of NUCAFE counsellors and FAs
100 FAs have approved business plans by end of 2015

Developing financial management self-checkers for NUCAFE and FAs
18 Financial counsellor were trained and have coached many FAs

Rating for effectiveness: 4 moderately satisfactory

Efficiency

47. NTF II resources were generally adequate. The budgeting and preparation of work plans was transparent and involved all stakeholders at the planning stage, which enhanced ownership of the proposed activities and efficiency in the allocation of resources towards the various activities. The project was implemented through TSIs with existing structures and under co-funding arrangement that minimized the costs for most of the project activities.

48. The project coordination with UEPB was sub-optimal, as explained in the section of effectiveness; UEPB’s role was marginalized due to conflicting mandates between UEPB and UCDA. There were no other major issues flagged regarding the implementation costs in country. The cooperation between UCDA and NUCAFE has been effective in promoting coffee production and export. Capacity building trainings followed the Training of trainers (TOT) approach. Trainings were first held with TSI and other national stakeholders, who took charge of training representatives of FAs and these in turn spread the trainings to the members of the farmer associations. This enabled access by many farmers at a minimum cost. Equally, for training, when possible, the project managers and advisors used already existing material to lower the cost (e.g. of the Coffee’s Exporters Guide used during the Ugandan trainings) and the TSIs would adapt the material at the national level. However, it should be acknowledged that some of the major improvement, such as the National Coffee Policy and UCDA’s M&E function, happened 2-3 years after the completion of NTF II, which are assisted by other advocacies.

49. The projected benefited from different technical units at ITC, and promoted a mix between ITC technical staff, international constants and national constants. This approach optimized the use of resources as the use of national experts for the capacity building of the clients reduced the cost of the implementation of the projects without any compromise on outputs.

Rating for efficiency: 4 moderately satisfactory

Impact: incomes of smallholder coffee farmers

50. Based on the impact survey, the beneficiary coffee farmers earned an average of USD1808 per year from coffee over the period 2011-2015, compared to an average
USD 683 per year by non-beneficiary farmers. That is, beneficiary farmers are earning an average of USD 1125 per year more than their non-beneficiary counterparts. Based on field interviews, the increased earnings from coffee were recounted to be translating into improved wellbeing, as more households have been able to send children to school and construct permanent houses with solar electricity.

51. It should be noted that this achievement in coffee-generated incomes was happened in a challenging coffee growing scenario. In recent years, many Ugandan coffee farmers lost coffee plants to the coffee wilt disease. There have been national replanting programmes financed by the Government, whereas coffee plants take three years to be productive. Without increase in productivity and in price, household incomes would have been dropping in this scenario.

Table 2: Changes in household income from coffee sales, 2011-2015, Uganda shillings

52. Price increase for coffee sales. The better income for beneficiaries could be attributed, approximately, to the higher price for beneficiary coffee producers and collective marketing (through NUCAFE). With better quality and production, project farmers have been able to sell in higher prices, even in cases without selling through NUCAFE. On average, beneficiaries sold about 60 per cent through NUCAFE in the past 5 years, and 40 per cent to middle men, primary processor, and exporters. The increase in coffee price for farmers was visible. Beneficiary farmers received relatively higher prices, both for processed and unprocessed coffee, compared to the non-beneficiary farmers. Based on the impact survey findings, the average premium to farmers was USD 397 per ton in 2015. Considering the total sales in last four years (2012-2015), the value of this premium delivered to beneficiary farmers is estimated at USD 0.78 million.

53. Collective marketing. The findings indicate that NTF II trainings have indeed enhanced the appreciation by farmers of collective marketing through NUCAFE that has enabled them sell to premium buyers. The training and support under NTF II improved farmer’s awareness of coffee quality and export requirements. This has enabled small producers to export in bulk through NUCAFE to buyers from Europe like Café Riva from Italy and other countries. Accordingly, whereas the volume delivered to the market has increased, the share sold through the farmer associations continues to

---

13 Calculated based on income 6,056,622 Uganda shillings for beneficiary, and 2,289,315 Uganda shillings for non-beneficiary, current prevailing exchange rate of 1$=3350 Uganda shillings
increase. This partly explains the higher income earned from coffee compared to non-beneficiary farmers.

54. **Premium price transferred to farmers.** NUCAFE has actually engaged in coffee value addition. The interviewed farmers association asserted that NUCAFE services have improved over the years. NUCAFE acquired a transport facility that has reduced transport charges for the farmers delivering their coffee for processing and grading for exports.

55. The new buyers pay higher prices for premium coffee (USD1.7-2 per kg), with the premium going directly to the farmers, as the producers sign sales contracts directly with the exporters. NUCAFE charges only linkage fees totaling to approximately 3 per cent, of which 1 per cent is mandatory CESS that is paid to the government for all exports, and the 2 per cent caters for handling charges including grading and salaries for the association’s staff at the hub.

56. It should be noted that NUCAFE is still a small operator in the Uganda coffee export market. In 2015, NUCAFE’s exports were only 0.14 per cent of the total exports by Uganda. The major change made by NTF II has been much at the capacity of TSIs especially NUCAFE, UCDA and that of coffee farmer associations in supplying quality coffee.

57. **Awareness about coffee quality standards.** Key informant interviews confirmed that there has been a tremendous improvement in coffee quality across the country over the last five years.\(^\text{14}\) The findings suggest that beneficiary farmers have adopted and are practicing more quality oriented practices, leading to better quality coffee, compared with non-beneficiaries. Field survey showed that 90 per cent of NTF II beneficiaries compared to 75 per cent of non-beneficiaries were undertaking at least four of the seven actions that improve quality of coffee. The difference was found to be statistically significant \((X = 17.249, P = 0.000, \alpha = 5\ per\ cent)\).

---

\(^{14}\) These were 90.1% among NTF II beneficiaries and 80.3% among non-beneficiaries and the difference was found to be statistically significant \((X = 7.112, P=0.008, \alpha =5\%)\).
Case Study: An exporter, with Uganda Quality Coffee Traders and Processors Association (UQCTPA)

Four years ago, the factory was receiving poor quality coffee with moisture content of 20 but the highest is now about 16. The poor quality was as a result of poor post-harvest handling and middlemen. Farmers were not harvesting even green beans, were sun drying on the ground and could not dry it well before delivering to the market. The post-harvest handling led to the deterioration of the coffee quality. Equally, middlemen were focusing on making a difference. As such, middle men/traders also destroying the quality by adulteration through mixing with foreign materials like stones, husks etc.

With the sensitization by the various stakeholders and enforcement efforts by UCDA, the quality of coffee has generally improved. UCDA has done a great job. UCDA inspects whatever coffee that comes into the factory and issues a certificate (form 5). In case the coffee is of poor quality, the factory hands over the coffee and the client to UCDA for further investigation. This has shifted the responsibility of ensuring quality to the traders/middlemen, who have also transferred to the farmers. This has increased awareness and adoption of measures that ensure quality. Most middlemen and farmers now appreciate and make a difference between the poor and good quality coffee, and the coffee directly from the farmers can now get 85 per cent of 90 per cent export quality compared to 60 per cent of 70 per cent previously.

58. **Coffee production and productivity increased.** Sampled coffee farmers reported increased coffee production as a result of training and sensitization activities by NUCAFE and UCDA. The average coffee production (quantity harvested annually) increased from 469 kg in 2011 to 790 kg in 2015, equivalent to 68 per cent increase. In 2015, the average annual coffee production among NUCAFE beneficiaries was reported to be more than twice that for the non-beneficiary households, as seen in the figure below. The evaluation also revealed that coffee productivity - yield per acre - has increased over the years. The yield among beneficiary farmers has increased from 293 kg per acre in 2011 to 365 kg per acre in 2015. The productivity among beneficiary farmers was consistently higher than that of non-beneficiary farmers over the period, as reflected in the table 4.

![Figure 1. Annual average coffee production (Kgs) per household](image)

59. The increased coffee yield is mainly attributed to improved coffee farming skills. NUCAFE trained master trainers on Good Agricultural Practices (GAP) who then trained
lead farmers and the executive committee members of their respective associations. NUCAFE also provided farmers with pruning equipment to help coffee to get enough light, which has increased productivity per plant. Following NUCAFE trainings under NTF II, many farmers have adopted the recommended agricultural practices including mulching, terracing, water harvesting, using composite manure, and inter-cropping with other shade plants. Embedded in the national coffee development programme led by UCDA, the increased productivity is also attributed to the better varieties of coffee seedlings (Coronal coffee) which are disease resistant.

**Impact: exports by NUCAFE to EU and other markets**

60. Coffee exports by NUCAFE, all supplied by coffee farmers associations, have increased by 204 per cent, from 190 tons in 2010 to 577 tons in 2015. In terms of market value, the increase is more impressive: from USD 0.31 million in 2010 to USD 1.27 million in 2015, equivalent to 243 per cent increase. The increase in export volume is largely attributed to the improved coffee quality of coffee (particularly related to the training in 4C certification) and enhanced export marketing (including outbound missions and participation in international coffee fora).

61. The EU remains the main export destination of NUCAFE, and exports to EU have increased by 355 per cent in this period. As shown in figure 3, exports to the EU have recorded a consistent increase over the years, from 77 tons in 2010 to 349 tons in 2015.

62. The number of international buyers has also increased from 2 in 2010 to 8 in 2015. Of these buyers, two are EU-based buyers that continue to buy more than half of the coffee exported by NUCAFE. There are also buyers from Korea and South Africa. ¹⁵

Figure 2: Coffee Exports by NUCAFE in metric tons 2010-2015

---

¹⁵ New buyers of NUCAFE include: Café Riva-Italy, café bene - Korea, Africa agro produce-south Africa, Luis Brefas, Jinso Limited, etc
Impact: enhanced institutional capacity

63. **Business and financial capacity of NUCAFE.** NUCAFE has adequate and functioning management systems, including capacity to develop and implement strategic and business plan. Following the end of the strategic and business plan developed under NTF II, follow-up strategic plans have been developed and are being implemented, and NUCAFE has been able to establish new partnership with development partners including Agribusiness Initiatives. It has also increased the intensity of services extended to its members. The membership of NUCAFE has increased from 125 farmer associations (FAs) in 2010 to 181 FAs in 2015. Its revenue has increased from 703 million ugx to 1,673 million ugx in the same 2015 (138 per cent). Its externally generated funds have increased as well; in 2014 and 2015, NUCAFE accessed 840 million and 2,428 million ugx in grants respectively. However, it also revealed the high level of financial dependence on donor funding, in that about 46 per cent of NUCAFE incomes in the past three years (2013-15) are from grants.

**Table 5: Financial resources of NUCAFE 2010-2015, Uganda shillings, million**

</tr>
</tbody>
</table>

64. On self-generated revenues, NUCAFE has embarked on the first investment phase of the Centre for Agribusiness and Farmer enhancement (CAFE.Factory), which is fully owned by NUCAFE, to provide coffee processing services to members and generate incomes. The CAFE factory includes a coffee roasting plant and a modern coffee sorting and grading facility. The roasting plant actually produces two brands of coffee, Omukago Pearl of Uganda and Nucafe, and the revenues generated from these two brands will enhance the financial sustainability of NUCAFE as well.

**Case study: NUCAFE’s new brands for marketing**
The roasting plant produces two brands of coffee, Omukago Pearl of Uganda and Nucafe brands. With the CAFÉ, coffee farmers will have the option of roasting their own coffee and selling it on the market to the final consumer or sorting and grading for the export of coffee beans. These will further integrate the farmer into higher nodes of the coffee value chain. NUCAFE intends also to construct a training center where farmers can be trained on the various aspects of coffee farming and quality management. The CAFÉ centre was conceptualized under NTF II, and has benefited from investments by Agribusiness Initiative Trust among other partners.

**Impact: influence on government policy**

65. The coffee export strategy prepared by NTF II was launched in 2013; however it was not implemented due to the conflicting mandates between UCDA and UEPB. Following the completion of the NTF II, UCDA and NUCAFE have been advocating for a farmer-oriented government policy for coffee sector, which resulted in the 2016 Coffee Strategy and Policy, adopted by the government. There is indication that the 2013 coffee export strategy informed the development of the 2016 National Coffee Policy and Strategy, which has critical elements on coffee export strategy.

66. The national coffee policy and coffee strategy have set fairly ambitious targets for the development of the coffee sub-sector and there is high political commitment than ever before. The political leadership has committed substantial funding with a target of increasing coffee production from 3.5 million bags in 2016 to 20 million bags by 2020. This target is to be realized by distributing 300 million certified coffee seedlings annually for the period 2016-2020 and enhancing access to coffee extension services.

67. Having benefited from NTF II support, NUCAFE is credited with raising awareness about the importance of the coffee value chain and enhancing the benefits to coffee farmers. NUCAFE was one of the key advocators for coffee quality improvement and continues to work with UCDA and the Uganda coffee federation in monitoring coffee quality across the country.

Rating for impact: 5 satisfactory

**Gender equality and women’s empowerment**

68. Gender consideration has been integrated in project design and implementation, although NUCAFE noted that the initial NTF II project design did not have a specific component/focus on gender. There were consistent efforts to ensure participation of women beneficiaries in project activities. Building on gender programming from previous support to NUCAFE, gender equality and women’s empowerment has been mainstreamed in all NUCAFE programmes as opposed to implementing standalone

---

gender projects, emphasizing gender equality at work and in the household. Accordingly, all training and capacity building interventions included gender sensitization.

69. NUCAFE in partnership with UCDA have held radio programmes educating farmers on the importance of gender equality and women empowerment in the coffee sector among other coffee related issues. A gender equity manager has been recruited and the M&E has gender disaggregated data.

70. Almost all coffee farmers surveyed by the evaluation confirmed that they have attended trainings or sensitization on gender equality and empowerment practices in coffee farming. The main providers of training were UCDA, NUCAFE, National Agriculture Advisory Services (NAADS), farmer associations, and exporters.

71. Field visits confirmed that gender awareness has been created and many coffee farmers have adopted gender sensitive practices on their coffee enterprises. Interviewers largely confirmed that women’s participation in decision making on coffee production has improved and participation in farmer association activities has reduced gender-based violence in coffee farmer households.

Rating for gender equality: 4 moderately satisfactory

Environmental considerations

72. Similar to the gender equality situation, the initial NTF II project design did not provide specific component on environment-friendly practice. However, NUCAFE made deliberate efforts to integrate environment conservation issues in training and other activities under NTF II. NUCAFE has implemented a specific programme on smart climate agriculture with financing from other partners including aBi Trust & Finance, Agriterra, and the USAID-funded Feed the Future’s Uganda Agriculture Enabling Environment for Agriculture Activity in the similar project areas.

73. The leaders and members of the farmer associations also reported receiving training on environmental friendly farming practices. Accordingly, many coffee farmers have adopted environmental conservation practices in their coffee enterprises, such as terracing, mulching, making manure and water harvesting.

Rating: not applicable

Sustainability

74. NTF II promoted a strong partnership between the private sector (NUCAFE) and Government agencies (UCDA & UEPB). The partnership has enhanced collaboration and strengthened the trust between the private sector and the public agencies. NUCAFE and UCDA continue to work together on key issues affecting the coffee sector as they value each other’s role in coffee advocacy. Also NUCAFE’s financial management capacity is getting more solid and trustworthy for other donors/sponsors/; the strengthened institutional capacity has enabled NUCAFE to access funding from development partners including USAID, World Bank, AGRA and
the African Union through the East African Farmers Federation, though the needs remain still high.

75. NUCAFE and UCDA have continued most activities initiated under NTF II project, including training for farmers in agronomic practices, quality and grading, 4C and export marketing, as most of the staff trained under NTF II are still working with NUCAFE and UCDA, and most of the trained financial councilors and trade advisors continue to support farmer associations. However, the capacity built under UEPB was eroded with the mass staff turnover.

76. NUCAFE has completed the first investment phase of the CAFÉ with its own coffee roasting facility and a modern coffee drying, sorting and grading facility. These are creating more opportunities for integration in higher nodes of the coffee value chain and are highly likely to propel the continued application of the improved agronomic and quality management practices.

77. The project approach of supporting capacity building of farmer associations focused on creating lead farmers through TOTs. Using lead farmers, also referred as animators, was a sustainable approach. They continue to train and support farmers on coffee farming and quality management practices.

78. Some of the supported farmers associations have been able to access credit to finance and effectively repay such credits. The number of farmer associations accessing credit and the value of credit received continues to increase.

79. However, there are still very strong needs from NUCAFE, farmers and the government, including the need to improve and scale up coffee production techniques and marketing skills, so that the majority of the smallholder producers and exporters in the country could benefit from better connection to value chains.

Rating for sustainability: 4 moderately satisfactory
IV. Evaluation analysis and findings: Bangladesh Project

Relevance

Relevance to ITC’s development goal
80. The Bangladesh Project aimed to build commercial relationships between Bangladeshi IT/ITES companies and European clients, develop TSI’s capacity to provide Business-to-Business (B2B) linkages and improve the image of Bangladesh as a destination for IT and ITES outsourcing. The design of the project was well aligned with ITC’s corporate development goals and ITC’s strengths in supporting TSIs and SMEs.

81. In project appraisal, the project selected the IT/ITES sector for intervention in Bangladesh by considering the importance of improvements in technology-based non-agricultural export and its contribution towards sustained growth and poverty reduction.

Relevance to Bangladesh development strategy and the needs of beneficiaries
82. The Project was well integrated with the ongoing efforts led by the Government of Bangladesh (GoB) to develop the IT/ITES sector. The project was designed to directly address some of the IT/ITES export sector challenges, such as (i) lack of concrete and coordinated actions to exploit the sector’s export potential; (ii) inability of IT/ITES associations to provide a results-oriented B2B matchmaking service to members; and (iii) insufficient and sporadic branding efforts that resulted in a low visibility of Bangladesh on the global IT outsourcing marketplace.

83. During the design and implementation stage, the project was strongly aligned with Bangladesh’s National ICT Policy 2009; more specifically, the project contributed towards objective 6, which focused on “strengthening exports”, by targeting one of its strategic themes i.e. to develop strong marketing, promotion and branding for Bangladeshi ICT products and services in global markets. The project was also relevant and timely in the attainment of ‘Vision 2021 – Digital Bangladesh’, a national programme that aims to use modern technology to improve every aspect of life by 2021. However, the client survey revealed that the IT/ITES sector is comprised of mainly small companies and it is becoming more diversified, and there is a need of clustering
among beneficiary companies for more customized solutions.

**Box: An emerging export engine in Bangladesh**

The IT/ITES sector of Bangladesh has grown considerably in recent years and the industry has been contributing significantly to the national income and also creating high quality employment for a sizable portion of young IT graduates in the country. According to BASIS, the total number of registered IT/ITES service providers has increased from 800 in 2010 to more than 1,500 in 2014 and the overall IT market size has significantly increased from US$ 300 million in 2009-2010 to US$ 800 million in 2013-2014.

It is estimated that in the last five years the average yearly growth rate of the industry has been over 40 percent. The growth has been driven by both increasing exports in recent years as well as the growing IT automation demand in domestic market. The local demand has been led by large automation projects by telecom, banking sector and export oriented garments/textile industry. The export market has grown significantly over the years. The export revenue has increased from US$ 35.36 million in 2009-10 to US$ 101.63 million in 2012-13. In terms of export destinations, North America still dominates, while in Europe countries, such as UK, Denmark and Netherlands, have emerged as major destinations during last few years.

84. Due to limited size and lack of international track record, most Bangladeshi IT/ITES companies faced difficulties in attracting and serving larger international clients. In addition, cultural barriers and lack of familiarity with foreign market made it challenging for local companies to approach their foreign counterparts. The limited capacity of TSIs and absence of quality-controlled and well-promoted platform showcasing Bangladeshi companies restricted collaborative opportunities. Hence, there was a need to build capacity of TSIs, such as Bangladesh Association of Software & Information Services and Dhaka Chamber of Commerce and Industry, to identify, target and enter markets for outsourcing services. More specifically, BASIS required support to strengthen its capacity to help companies develop marketing materials and market-entry plans, which were provided under the project.

*The synergy between NTF II and CBI programmes*

85. The NTF II and CBI actively explored cooperation in supporting coaching and marketing, and several joint events co-financed by CBI’s Export Coaching Programme (ECP) took place from August 2011 to March 2012. In the period of 2008-2014, the ECP had been supporting export coaching in several developing countries including Bangladesh. With the support of CBI management, the NTF II Bangladesh team established regular coordination with the ECP team.

86. Within the NTF II framework, CBI, ITC, DCCI, and BASIS partnered in conducting a 2-day Foreign Trade Representation Workshop on Promoting Bangladesh companies in the
IT/ITES sector, in Rotterdam in September 2011. About 10 Bangladeshi diplomatic counsellors and trade attachés, stationed in Western Europe, were trained on promoting Bangladeshi IT/ITES industry in their duty stations. This training facilitated the diplomats in better understanding the key elements in marketing and promoting IT/ITES companies.

87. Following the awareness building for diplomats, in December 2011 the ECP team organized a one-week EXPRO training in Rotterdam on IT outsourcing for 24 Bangladeshi participants, mainly NTF II beneficiary companies. The beneficiary IT/ITES entrepreneurs were introduced to the EU trade structures and business practices in the IT outsourcing industry, and the training prepared them in using marketing and promotional tools and developing export marketing plans.

88. Also CBI co-sponsored the participation of beneficiary companies in some matchmaking events in Europe. In August 2011, CBI co-sponsored a joint CBI-NTF II business matchmaking event in Amsterdam, and in March 2012 about 13 NTF II companies took part in the CEBIT trade fair in Hannover, with a booth presence on the CBI stand. The complementary services of CBI and NTF II in supporting marketing and coaching are exemplary in these cases.

Rating for relevance: 5 satisfactory

Effectiveness

89. The effectiveness of the project in terms of achieving outcomes is considered as satisfactory. NTF II has built a good base for the IT outsourcing companies to do marketing abroad. At the beginning of the project, doing business with EU and other foreign clients was considered as a bold move; today it’s becoming a common marketing practice.

90. **Outcome I. Building commercial relationships between local ICT companies and foreign clients:** This outcome has been well achieved, mainly realized after the completion of NTF II through the continued efforts of NTF III. Through a rigorous selection process, the Project identified 40 Bangladeshi IT/ITES companies that were exporting, or have the potential to do so, as beneficiaries of the project activities. These companies were then invited to multiple business-linkage and matchmaking events. The selected companies also benefited from expert coaching on export marketing and their company profiles were included in a catalog and an online directory. It should be noted that the project made necessary adjustment in identifying motivated beneficiary companies to ensure the project effectiveness. Due to a lack of active participation, 8 companies were removed and replaced with newly selected companies who met the selection criteria. By undertaking this strict action, the Project succeeded in creating a stimulating effect among beneficiary companies.

91. More specifically, between January 2011 and June 2013, the project organized 12 specialized business matchmaking events across different countries, including Denmark.
The events were attended by 34 Bangladeshi companies and more than 150 European companies from the target markets and resulted in 797 pre-scheduled B2B meetings. The Project’s initial target was to support 30 new business contacts and ensure 70 per cent participation of beneficiary companies at the matchmaking events. It went over the target as it led to the creation of 192 business contacts and on average 75 per cent of the beneficiary companies participated in the organized events.

92. To demonstrate how the initial contacts led to new business for project beneficiary companies, a good example is the case of the company Brain Station 23, which is a Bangladeshi software development company provides customized web applications and mobile software development services. It was established in 2006 by a university graduate with only 4 people - 2 programmers and 2 quality assurance professionals. Over the years, the company has experienced significant growth and today has delivered customized solutions for clients in a wide range of sector including finance & banking, telecommunications, real estate, software industry, E-Commerce, and retail sales industry.

93. Brain Station 23 was selected for the NTF II Bangladesh Project and had the opportunity to participate in numerous activities under the Project. In November 2011 during a match-making event in Denmark, Brain Station-23 met with representatives of nSales, who were looking for partners that could help to create products in a more economical way without comprising on quality. nSales, a Danish company founded in 2005, specializes in software development, focused on handheld devices and tablets. They develop both standard applications and frameworks targeted at service technicians and sales representatives.

94. After the first meeting, nSales became very interested in Brain Station 23 because of its presence in technologies, such as ASP.net MVC 3 and MVVM JS, and its experience with Telerik and iPad development. Brain Station 23 and nSales engaged in a one-month trial run and that turned out to be very successful. As a result, the two companies engaged in a more long term relationship and undertook multiple collaborative projects.

95. NTF II also facilitated the participation of European delegations in SOFTEXPO Trade Fairs held in Dhaka during the project period. The SOFTEXPO is Bangladesh’s biggest showcase for software products, ITES and ICT system solutions and it is attended by business organizations ranging from large conglomerates to SMEs, government departments & agencies, non-profit & development organizations as well as individual buyers. More specifically, the project ensured participation of European companies in the fairs organized in 2011, 2012 and 2013 - 8 European companies participated in SOFTEXPO 2011, 12 European companies in SOFTEXPO 2012 and 13 European companies in SOFTEXPO 2013. Initially, the participating European companies were mixed in terms of their area of business, but over the years the invitations were more selective and the delegation become more relevant to the beneficiary companies.
96. **Outcome II. Building TSI capacity to provide B2B linkages:** This outcome is largely achieved, especially in the case of BASIS. The project provided training in a number of areas including: designing the business linkage service as a viable support service for SMEs, training the TSIs’ staff to manage the business linkage service effectively, coaching TSIs to undertake demand side analysis as a strong basis for the new service offering, and building strong links between the Bangladeshi TSIs and partner TSIs in selected European markets. Guidelines were prepared on the deployment of the B2B matchmaking service and its integration within the service portfolio of BASIS and DCCI. The guidelines described the management process, staff responsibilities and duties for the following three B2B matchmaking services:
   - Offering a matchmaking service to a single buyer in Bangladesh;
   - Handling an incoming delegation and organizing B2B meetings for its participants in Bangladesh;
   - Managing an outbound mission and organizing B2B meetings for its participants abroad.

97. After endorsing guidelines on the deployment of the B2B matchmaking service and its integration within their service portfolio, BASIS and DCCI assigned additional human resources and more importantly, launched a new B2B service and also an online directory. For instance, BASIS launched the service in October 2012 and organized multiple B2B meetings for beneficiary companies during the SOFTEXPOS in 2012 and 2013. It is to be noted that the services were provided under the active coaching of the ITC matchmaking expert. DCCI officially launched in April 2013 the Online Directory for its 14,000 members, which integrates the Business-to-Business (B2B) service as part of the DCCI services portfolio. This followed the deployment of an export-oriented online member directory on the BASIS website with the support of the project. In addition, 16 non-NTFII companies took part in B2B meetings during the SOFTEXPOS; these meetings were organized by BASIS using a pre-defined fee that the non-NTFII companies had to pay.

98. **Outcome 3: Improving the image of Bangladesh as a destination for IT and ITES outsourcing:** There are good initial results regarding this outcome, and the project has established good examples and operational models for the national partners to scale up. However, it is beyond this project’s capacity to establish the image of Bangladesh as a destination for outsourcing. The majority of the branding support went into defining a strategic framework for the branding of the IT/ITES industry jointly with BASIS and DCCI, as well as seeking the attention of media and consultancies specialized in IT outsourcing. The Project’s branding strategy was designed in collaboration with DCCI and BASIS during the project design phase, based on the existing Bangladesh NEXT brand. In May 2012, a strategic roadmap was designed in the framework of a private-public dialogue.

99. Then in December 2012, the “Positioning Bangladesh” conference was jointly organized by DCCI and BASIS with the support of NTFII Bangladesh. The Prime Minister inaugurated the conference and several key ministers actively participated and
contributed to the debate. Many local business leaders, in particular from the IT industry, attended the conference and this conference provided an opportunity for foreign media and industry consultants to discover Bangladesh’s IT industry. Journalists were also invited to other events organized under the project both in Bangladesh and abroad. As a result, several articles dedicated to Bangladesh’s IT and ITES industry were published. These articles all highlighted the great potential the country had in IT/ITES exports and they all contributed to building a more positive image for the country’s IT/ITES sector.

100. Based on the Project’s logical framework (See Annex VII), the project was able to reach almost all the set targets related to Outcomes I and II, and in most cases overachieved the target by a significant portion; the progress towards achieving Outcome III become more significant under NTF III. Generally, it can be concluded that most activities did lead to the expected outcomes.

Rating for effectiveness: 5 satisfactory

Efficiency

101. The efficiency of the project in terms of project management is considered as satisfactory. The project was directly managed by the Project Management Team (PMT), which was composed of a Geneva-based Project Manager and National Project Coordinator (NPC). They were mainly responsible for overseeing the day-to-day activities, management and tracking of budget and resources, administrative oversight, including monitoring and compliance, and managing the relationship with BASIS and DCCI. The PMT worked in close collaboration with the BASIS and DCCI through designated focal points from the respective organizations. Direct link between Project Manager and the TSIs and NPC facilitated effective communication, which ensured timely decision-making.

102. A Project Coordination Group (PCG) was created and this group consisted of the following members - two focal points, Presidents of the BASIS and DCCI, NPC, and the Project Manager. Occasionally, the Board and Secretariat members of both TSIs, and NTFII Programme Manager participated in the PCG meetings. Due to conflicting schedules, the meetings were sometimes delayed; however, this issue was mitigated through the use of video conferencing. Nevertheless, it is to be noted that the project benefited from its flexibility due to the responsibility given to the PCG to decide on operational adjustments throughout project duration, with the approval of the Programme Management and with regular reporting to the Project Steering Group. In addition, international and national consultants were regularly used for assessing export markets and various capacity building activities within the Project. The use of national experts for the capacity building of clients often reduces the cost of project implementation. In this particular project, there was proportionally less use of national consultants. This was mainly due to the project’s focus on assessing foreign markets and linking beneficiary companies with clients in European countries.
103. The 2013 NTFII evaluation confirmed the validity of a TSI-centered value-chain based approach to create exporter competitiveness in selected sectors and declared it to be efficient. In the case of Bangladesh, it was observed that the DCCI was less engaged in the implementation and this was mainly due to their limited involvement in the IT/ITES industry. Nonetheless, DCCI being the largest and most active Chamber in the country with a strong and influential leadership was able to give the Project greater visibility and also complemented various efforts made by BASIS’s efforts through their lobbying power.

104. In terms of monitoring and evaluation, a Results Based Management (RBM) Framework was defined at the programme and project level after the project went into implementation and also a baseline analysis was conducted in the country. In addition, a monitoring and evaluation training was undertaken to inform members of partner TSIs about approaches to monitoring changes at impact level. The quality of the monitoring data and information collected improved once the 2011 RBM framework was developed. The 2011 and 2012 progress reports thoroughly used the RBM framework but did not report on all indicators, and also an evaluation was done right after project completion to assess accountability and governance/management.17

105. With the strong support of partner TSIs and guidance from experienced national and international consultants, the management of this Project can generally be regarded as efficient. Furthermore, the TSI-centered value-chain based approach to create exporter competitiveness was instrumental to the Project. The overall cost for the Project was USD 2.33 million, slightly above the initial budget of USD 2.17 million (i.e. 7.3 per cent). At the time of NTF II, there were no other sector development projects under implementation. Hence, there were no opportunities to develop further partnerships beyond CBI and Danish International Development Assistance (DANIDA). NTF III has enhanced collaboration in this respect, largely because the context had changed. A large World Bank lending project had been put in place to support the development of the ITC industry, followed by an Asian Development Bank funded-project aimed at building the capacity of the industry. Coordinating with the new donors had become a priority under NTF III.

Rating for effectiveness: 5 satisfactory

Impact

106. Three years after NTF II completion, multiple beneficiary companies recounted that the marketing techniques learned from NTF II (B2B events and training) allowed them to do marketing in other foreign markets, such as the US, Australia, Saudi Arabia, and Korea, and they attributed today’s marketing capacity to their participation in NTF II. This is a result which was not observed upon the completion of the project. Back to 2013, the perception was that those B2B events brought in business information leads; however, it was very difficult to transform them into real business due to various challenges.

17 CBI comments: Not all indicators have been measured, only the relevant ones at that time.
107. **IT/ITES business development.** The NTF II through its activities supporting IT/ITES export has contributed to the expansion of the IT/ITES sector in Bangladesh. According to the survey, the total revenue of eight participating companies have increased from USD 4.26 million in 2010 to US 13.22 million in 2015, whereas their export revenue has increased from USD 3.1 million in 2010 to USD 8.46 million, with Netherlands being their top IT export destination followed by the US, Denmark and the UK. Also, six out of 10 participating companies reported that the NTF II Project had “medium” to “very high” influence on their respective company’s growth strategy.

| Box: case study on Nascenia: |
| How the commercial relationship allowed two companies to grow together in a sustainable manner |

Nascenia is a Bangladeshi custom software development company that offers cloud based web and mobile solutions to companies in Europe and North America. The company was established back in July 2010 by three young IT experts. Nascenia was selected as one of the 40 beneficiary companies under the NTF II Bangladesh Project and became an active participant in several activities under the Project. They attended 10 B2B Matchmaking events, 4 times SOFTEXPO, 4 CEBIT Expos, and 8 Workshops/ Trainings. Their participation in those events helped them in making

108. Prior to NTF II, Nascenia was visible to its potential clients via search engines on the internet, references, and occasionally match making events. The Project helped Nascenia to also explore the European market – whenever they attended NTF events in Europe they took that opportunity to meet with their existing clients in other parts of the Europe and some of those interactions brought them new business opportunities.

109. During a matchmaking event hosted in Dhaka at the beginning of March 2012, Nascenia came across a Copenhagen based company, Better Collective - a web publishing company that specializes in developing, designing, copywriting, and marketing strategies for the web. Following the event, Nascenia was invited to work on a small project supporting the core business of Better Collective. Subsequently, Nascenia got the opportunity to work on their core projects. Moreover, the two companies also engaged resources to build a web application in which Ruby on Rails was used as a technology. During this period, Better Collective grew as a company and Nascenia grew with them.

110. The findings are consistent with those provided by another survey, which was undertaken by ITC in June 2013. That survey showed that 24 beneficiary companies engaged in new businesses and 50 percent of those companies reported an increase in exports in 2012 directly related to NTFII Bangladesh B2B activities. The average increment in their export was about 25 percent. Furthermore, the survey highlighted that the majority of the beneficiary companies are of the opinion that to an extent the Project influenced them through the following: (i)Strengthen company’s links with
foreign buyers; (ii) Enhance company’s skills in making the best of meetings with buyers; and (iii) Increase company’s knowledge of buyers’ demand and expectations.\footnote{90 per cent of the 25 survey answers, June 2013.}

111. The increase in export was also supported by recent positive changes within the country, such as larger internet user-base, better connectivity as well as introduction of new payment methods (online payment – through credit card and mobile payment), a good number of companies are focusing or diversifying on different web based services that include specialized portals, listing services, e-Commerce, e-Learning, and payment intermediary services. It must be noted that the export value is still meager compared to other outsourcing countries in the region.

112. The creation of the strategic framework for the branding of the IT industry, jointly with BASIS and DCCI, as well as getting the attention of media and consultancies specialized in IT outsourcing, contributed to building a better brand for the country. In 2014, AT Kearney - a leading management consultancy firm - for the first time included Bangladesh in its Top 50 Global Services Location Index, which is an index based on metrics with three categories - financial attractiveness, people skills and availability, and business environment. It ranked Bangladesh as the 26th best destination for IT outsourcing globally. In 2015, the country moved four steps ahead from the previous year’s ranking and became 24th for successes in IT Outsourcing, Back Office or Offshoring, Business Processing Outsourcing, Voice Service, etc.

113. Since 2010, Gartner, a global technology research and advisory company, has placed Bangladesh on its list of ‘Top 30 countries for offshore services’. Moreover, Bangladesh has achieved several prestigious recognition including ITU Awards and South-South Award. However, the survey showed that the beneficiary companies had mixed reviews about the branding efforts and voiced that maybe the branding of the industry should be tackled at a more strategic level with more involvement from the Government.

114. **Employment generation.** The NTF II has contributed to the expansion of the work force within the IT/ITES sector in Bangladesh. According to the survey, across 10 beneficiary companies the total number of employees has increased from 605 in 2010 to 862 in 2013, and they reported that 59 permanent jobs and 44 temporary jobs were created directly by the Project. The sector’s contribution towards overall employment creation has not been significantly high when compared to other traditional sectors; however it did create high quality employment with satisfactory compensation for IT professionals.

115. **Capacity building.** As confirmed by all partners, BASIS’s capacity has improved significantly in the past years, especially in arranging B2B events and matchmaking. Although IT export is not yet making a significant part in the country’s export portfolio, BASIS and IT outsourcing companies are aspiring to make a bigger share in national export. Despite various challenges, improvements have been made in terms of IT infrastructure in Dhaka: the price of internet has dropped, and some commercial office
spaces, such as the IDB Building and BDBL Bhaban, have been dedicated for IT related business. Looking at this trend, BASIS could take a more prominent role in influencing IT policy and promoting export.

116. As mentioned earlier, both BASIS and DCCI launched supporting services for their member companies. The survey also indicated that the services of BASIS improved significantly over the NTF II period and beyond. For instance, four out of the 10 surveyed companies sought for direct services from BASIS and DCCI. The majority of the 10 companies acknowledged that these TSIs had satisfactory capacity and that their capacity had improved over time. The ratings were much lower when it came to DCCI’s services but that may be due to its lack of involvement and familiarity with the IT/ITES.

Figure 3: Trade Supporting Services Provided by BASIS & DCCI

Rating for impact: 5 satisfactory

**Gender equality and women’s empowerment**

117. Historically, there has been limited participation of women in IT workforce - only 13 percent of the IT workforce is women and only 1 percent of IT/ITES companies are led by women. It is to be noted that in Bangladesh there are certain social barriers — including stereotypes and gender bias — are still today hampering women’s progress in the IT sector. From the beginning of NTF II, the project made significant effort to encourage the participation of women. For instance, during the selection of the beneficiary companies, a particular attention was given to companies with women leadership and companies that adopted female-sensitive and family-acceptance work environment for its employees.

118. According to the survey, the beneficiary companies reported some positive contribution by the project. First, the total number of female employees in the sample beneficiary companies increased from 61 to 159 and about 40 new female employees were hired as direct outcome of NTF II. This not only contributed to increasing the role of women in IT/ITES sector, but also gave visibility to successful women in the industry, so that they can become role models. A case study is provided to highlight the success
of one women-lead NTF II beneficiary company that has succeeded and motivated other female professionals along the way.

**Case Study - A women-led IT company in Dhaka**

UY Systems was one of the few beneficiary companies led by a woman. It was established in 2003 and currently mainly provides comprehensive solutions in iPhone/iPad apps development, Android apps, mobile optimized website, web designing, web development and E-Commerce web development, image editing, graphics design service, and software development. It currently successfully exports to a wide range of countries including Denmark, the Netherlands, UK, Norway, Saudi Arabia, Malaysia and Ireland.

The company faced significant challenges in finding its position in the country’s competitive ICT industry. Initially, the company attempted to access the domestic market; however, potential clients were very hesitant to engage in business with a women led company. As a result, the company changed its focus to international clients and was able to get positive responses from the foreign buyers. The NTF II helped UY Systems to make contacts with a wide range of European clients and also it helped in showcasing the success of UY Systems in both local and international platforms, which further motivated and inspired women IT graduates across the country.

The CEO of the company also undertook a wide variety of initiatives herself to promote women entrepreneurship in IT sector. She worked with the Asia Foundation’s Bangladesh training programme to motivate young women to become entrepreneurs and also mentored young entrepreneurs and freelancers, and pioneered an online healthcare portal that over 130 Bangladeshi businesswomen used to promote and sell their services. Her active work has been recognized at both local and international level. More specifically, she was the first woman to be elected as Board Director in the BASIS and she also served as Vice President of Bangladesh Women in Technology. More recently, due to her corporate success and mentorship work, she was invited to Nairobi to receive the International Centre for Trade and Sustainable Development’s prestigious Women Exporter of the Year Award.

Unfortunately, women entrepreneurs across Bangladesh regularly face social barriers that hinder their business achievements.

There were also some ad-hoc attempts to support women within the IT/ITES industry. For instance, a conference on “ICTs as a Career Path for Women: Opportunities and Challenges” was organized in Bangladesh during the e-Asia conference in December 2011 and two role models from Bangladesh were added to the highly visible “Girls in ICT” database managed by the International Telecommunications Union in Geneva. Under NTF III, the women’s empowerment component is further strengthened. A good reference is the establishment of Women’s Forum by BASIS in 2015. The Forum’s objective was to boost the role of women and to
expand their reach to IT-related fields, as well as younger women currently working towards IT-related degrees.

Rating for gender equality: 5 satisfactory

Environmental considerations

120. The IT/ITES sector, in general, has comparatively fewer environmental footprints. Therefore, the need for an environmental impact assessment did not arise at appraisal and so initial environmental examination was not carried out. During project implementation, no issues related to environmental impact were reported.

Rating: not applicable

Sustainability and exit strategy

121. The Project was designed with the aim that the beneficiary companies would be able to maintain and expand their commercial network in Europe, and the responsibility of beneficiary companies would increase for selecting and paying service providers for advice and training, market analyses and participation in trade fairs and missions. It is to be noted that the sustainable impact on the sector as a whole, will only be guaranteed if a critical mass of exporting companies are able to engage in sustainable business with European clients.

122. The financial capacity of TSIs will also be a deciding factor as to whether they will be able to provide quality services to the members. In the case of BASIS, it is observed that its income has increased from USD 0.18 million in 2011 to USD 0.47 million in 2015. A significant increase has been noticed in its revenue from member’s subscriptions and fees, which has increased from USD 31,178 in 2011 to USD 133,396 in 2015 due to its growing membership base.

123. In terms of sustainability, the project’s direct interventions did lead to new business contacts and in cases where business was conducted the companies succeeded in securing subsequent business opportunities. However, upon the completion of the Project the TSIs found it challenging in maintaining B2B services at the same frequency and standard. The TSIs have managed to launch two services, namely B2B matchmaking services and an online database, and have allocated resources for the provision of such services, but there is a concern among the beneficiaries as to whether the TSIs have the financial and operational capacity to continue these services. However, it is to be noted that the sustainability of the TSIs’ services also relies on the amount of trust the members will have in the delivery of those services by the TSIs.

124. The activities in regards to the branding of Bangladesh as the next ICT export destination has been limited to articles and inclusion of the country in various global ICT indexes. Nevertheless, the political commitment of the Government under the
flagship vision of Digital Bangladesh is expected to give a sustainable boost to the branding efforts.

125. Moreover, the Government recently took several noteworthy initiatives that are likely to help in sustaining the global image of Bangladesh’s IT/ITES sector:

- Exemption from income tax until 2015 for all Software and ICT Service companies, including those under foreign ownership;
- Establishment of a government sponsored long-term equity fund and short term working capital financing for ICT companies;
- Construction of a special hi-technology and software technology park to facilitate the development of infrastructure needed by companies that outsource activities to them.

126. According to the Project Document, the exit strategy was that after the completion of ITC intervention the beneficiary companies would continue to maintain and grow its commercial networks with the help of TSIs, who were expected to increase their portfolio of supporting services. As a kind of practical exit arrangement, the NTF II activities were actually largely continued by the NTF III. On one hand, this shows that according to ITC these activities were perceived to be effective and thus there was need for them to be replicated and scaled up. On other hand, it shows that the activities under NTF II were too new to generate sustainable impact.

Rating for sustainability and exit strategy: 5 satisfactory

Innovation

127. The NTF II Bangladesh project design is considered as highly innovative. In the context of Bangladesh, the B2B concept was very innovative for the IT/ITeS sector export. The challenges for the local companies were not just in finding export clients but also in understanding their needs and building long-term relationships. The various B2B events organized in different export destinations allowed a group of Bangladesh IT/ITeS companies, for the first time, to get closer to potential foreign clients, enabling them to relate more with their clients and their needs. The model effect of these B2B events, created by NTF II and continued by NTF III, is well spread across the sector, as today there are numerous Bangladeshi IT/ITeS companies are securing business from EU and non-EU markets, such as Australia, Korea, Saudi Arabia, the US, etc.

128. The in-country coordination arrangement was very innovative as well. The operational function relied on an efficient core network combining two executing agencies, one of which was a technical TSI (BASIS) and the other one was a political TSI (DCCI). The role of the BASIS was to assist the project in tapping into the IT/ITeS sector and to provide technical know-how in designing the various components of the Project. On the other hand, the DCCI acted as an intermediary between BASIS and various local business networks, and also contributed in encouraging investors in pooling resources towards the growing IT/ITeS sector. This operational arrangement of dual TSIs enabled a more cohesive approach for IT/ITeS sector development.
The bottom-up approach in helping the micro and small IT/ITES companies to connect directly with foreign buyers was an innovative way to realize their export potential. It is often seen that development agencies try to intervene primarily at the policy level in developing countries expecting a trickle-down effect. However, due to various challenges related to governance the policy interventions do not immediately boost trade and the projects’ outcomes get delayed or remain unfulfilled. NTF II ensured that the project services directly served the end beneficiaries and their capacity to export. Furthermore, the project’s components were scheduled to be in sync with the ongoing efforts lead by the Government in developing the IT/ITES sector, and this synergized the efforts and contributed to the project’s outcomes.

While undertaking the assignments supported by the project, the beneficiary companies were heavily engaged in providing innovative solutions to their foreign clients, and many of them were first-time clients. Thereby, this project’s contribution towards innovation was seen at all levels and is commendable.

Rating for innovation: 6 highly satisfactory
V. Conclusions and Recommendations

Conclusions

131. The NTF II Bangladesh and Uganda Projects have attained significant progress and results in terms of supporting sustainable export for SMEs in the IT/ITES sector and in the coffee sector respectively. The outcomes observed in the Bangladesh project are transformative: at the beginning of NTF II implementation, exporting IT/ITES services was a daunting challenge for the small enterprises; six years later, it has become a common practice to do international marketing, and the enterprises are securing clients in EU markets and other countries such as the US, Australia, Saudi Arabia, and South Korea. The contribution of NTF II (and NTF III) is well recognized by partners in Bangladesh. The impact generated by NTF II on the coffee sector in Uganda is impressive as well: the collective marketing promoted by NUCAFE has enabled smallholder coffee farmers to earn annual income of USD1808 per household from coffee growing, about USD 1,125 more than non-project farmers; and exports to EU have increased by 355 per cent from 2010 to 2015. The impact is also reflected in national policy advocacy, as evidenced in the recently released National Coffee Policy and Coffee Strategy 2016-2020.

132. Uganda project. In terms of advocating for policy change, under NTF II, initially a National Coffee Export Strategy was developed and launched by UEPB/the Ministry of Trade, however the export strategy was not embedded at the senior level of the relevant sector institutions such as UCDA under the Ministry of Agriculture Animal Industry and Fisheries. The turnaround happened three years after NTF II completion, in 2016 the Government endorsed a National Coffee Policy and National Coffee Development Strategy, which were prepared based on the policy paper delivered by NTF II and advocated by UCDA and NUFCAFE. The new strategy is now being earmarked with a concrete budget and supported with a strong political commitment.

133. Impact generated by the project. At the coffee-producer level, the increased coffee yields, price, and house income are visible today. It should be noted that this achievement in coffee-generated incomes was happened in a challenging coffee growing scenario. In recent years, Uganda coffee plantation suffered from coffee wilt disease and many farmers lost coffee plants to the disease. There have been national replanting programmes financed by the Government, whereas coffee plants take three years to be productive. Without an increase in productivity and in price, household incomes would have been dropping in this scenario. The impact survey across 398 coffee households showed that: each coffee farming household earn an average of USD1808 per year from coffee sales in the period 2011-2015, compared to an average of USD 683 by non-beneficiary farmers. The better income for beneficiaries could be attributed, approximately, to the improved farming practices, quality enhancing, and collective marketing through NUCAFE.

134. Another significant impact is the increased exports to the EU and other markets. Coffee exports by NUCAFE, all supplied by coffee farmer associations, have increased by
204 per cent, from 190 tons in 2010 to 577 tons in 2015. In terms of market value, the increase is more impressive: from USD 0.30 million in 2010 to USD 1.28 million in 2015, which is equivalent to a 243 percent increase. This increase in export volume is largely attributed to the improved quality of coffee beans (particularly related to the training in 4C certification) and enhanced export marketing (including outbound missions and participation in international coffee fora).

135. NUCAFE’s collective marketing and farmer ownership model is innovative and effective in benefiting smallholder farmers. One critical factor behind the increased income for household is the quality of coffee beans. Working with NUCAFE, more farmers are aware of coffee farming techniques and quality requirements, and the coffee hub set up by NUCAFE actually works as a first step quality assurance. This has enabled farmers to sell quality coffee beans in bulk.

136. It is well noted that NUCAFE transfers price premiums directly to farmers, which is actually one of the critical success factors. NUCAFE’s capacity has improved over the years; it acquired a transport facility that reduced transport charges for processing and grading and it has secured new buyers, such as Café Riva-Italy, Café Bene- Korea, Africa agro produce-South Africa, etc. Before working with NUCAFE, farmers were selling through middlemen; now they sell in bulk through NUCAFE directly to foreign buyers at a premium price.

137. Relevance. In terms of project design, the project responded appropriately to the competitiveness challenges faced by smallholder coffee farmers. The TSIs chosen - UCDA and NUCAFE - were suited to deliver the project outputs in coordination with other key players in the public and private sectors. The project contributed to the attainment of the Government’s development strategy objectives in the coffee sector as well as the development goals of ITC.

138. The relevance of a continued support in coffee export is still high in next five years. In 2016, the Government renewed a firm commitment to transform the coffee sector, which is a part of the National Development Plan. In line with the government plan, coffee production in Uganda will increase dramatically: from the current 3.5 million bags to 20 million bags over the next five years (2016-20). Facing the upcoming production surge, the Government, exporters and coffee producers are in great need of strategic support for international marketing and branding, work areas where ITC has a comparative advantage among international organizations. In this regard, the NTF programme, based on experience from implementing two phases, is well positioned to offer continued and upgraded technical support in international marketing, which should be implemented under a strategic partnership with the Government.

139. Coffee has been the leading single largest export commodity, earning Uganda over USD 402 million. The Government has committed to increase funding to the sector from ugx 37 billion in 2015/16 to ugx 77 billion in 2016/17, and this will be sustained in the medium term. For example, 300 million coffee seedlings will be distributed annually and the number of Government extension workers is projected to increase.
Coffee trade also holds great potential for poverty reduction. Poverty is still a persistent challenge: as of 2014, about 63 per cent of Ugandans were either poor (20 per cent living below the national poverty line USD 1 per day) or vulnerable to poverty (43 per cent barely passed the poverty line), according to UNDP 2014 national poverty report. Among these, the poorest people include 8 million smallholder farmers scattered throughout the country. The observed results of NTF II in supporting the coffee sector have been significant among the smallholder farmers; coffee plantation is becoming a major income source for rural households supported by NTF II/NUCAFE. Typically, farmers grow mixed crops, and often there is visible contrast between the commercial farming of coffee plantation (for income generation) and the rain-fed farming of other crops (for food consumption). A continued coffee project will make a difference to poverty.

Effectiveness. The NTF II Project was largely effective in achieving project outcomes. The NUCAFE and UCDA made significant progress in supporting coffee export promotion and coffee production. In terms of the expected update and review of the NES for coffee sector, UCDA and NUCAFE led the development of the coffee export strategy, while UEPB played an advisory role, especially ensuring that the coffee export strategy is aligned to the national export strategy. The NES was launched but not implemented, partly because of conflicting mandates between UCDA and UEPB.

There is indication of improved institutional and M&E capacity of UCDA and NUCAFE. The M&E Capacity for UCDA and NUCAFE were enhanced significantly. The profile, visibility and position of NUCAFE in the coffee sub-sector improved, with the collaboration with UCDA and UEPB. This has resulted into incorporation of NUCAFE aspirations into the national coffee policy and coffee sector export strategy and more opportunities for coffee farmers along the supply chain.

In terms of enhanced business capabilities of farmers associations to assist producers and exporters to take advantage of opportunities in the European market, the NTF II project provided capacity building in coffee marketing and export improvement and access to finance. Close to all expected outputs were achieved, and the impact has started to emerge with 4C certified farmers associations starting to export and accessing credits. According to project document, eight importers are procuring coffee from NUCAFE, of which two are EU based, benefiting 80 FAs that are exporting through NUCAFE.

Gender equality consideration has been integrated in implementation, although NUCAFE noted that the initial NTF II project design did not have a specific component/focus on gender. There were consistent efforts to ensure participation of women beneficiaries in project activities. Building on gender programming from previous support to NUCAFE, gender equality and women’s empowerment has been mainstreamed in all NUCAFE programmes, emphasizing gender equality at work and in the household.

Bangladesh project
145. NTF II built a good base for the IT outsourcing companies to do marketing abroad. At the beginning of the project, doing business with the EU and other foreign clients was considered as a bold move; three years after NTF II completion, multiple beneficiary companies recounted that the marketing techniques learned from NTF II (B2B events and training) allowed them to do marketing in other foreign markets, such as the US, Australia, Saudi Arabia, and Korea, and they attributed current marketing capacity to their participation in NTF II. This is a result that was not observed at the completion of the project. Back to 2013, the perception was that those B2B events brought in business information leads; however, it was very difficult to transform them into real business ventures due to various challenges.

146. As confirmed by all partners, BASIS’s capacity has improved significantly in the past few years, especially in arranging B2B events and matchmaking. Although IT export is not yet making a significant part in the country’s export portfolio, BASIS and IT outsourcing companies are aspiring to make a bigger share in national exports. Despite various challenges, improvements have been made in terms of IT infrastructure in Dhaka: the price of internet has dropped, and some commercial office spaces, such the IDB Building and BDBL Bhaban, have been dedicated for IT related business. Looking at this trend, BASIS could take a more prominent role in influencing IT policy and promoting exports. During the NTF II period, the Bangladesh project manager and the country coordination played an active role in collaborating with CBI and sharing information with DANIDA. The complementary services of CBI and NTF II in supporting marketing and coaching are exemplary in these cases. However, at that time there were no other sector development projects under implementation. Hence, there were no opportunities to develop further partnerships beyond CBI and DANIDA. Synergy building was significantly emphasized by NTF III, and coordinating with the new donors had become a priority.

147. Relevance. The project was in line with the ITC’s mandate and was designed to directly address some of the core issues facing IT/ITES export in Bangladesh. The innovative approach of connecting IT/ITES startups to foreign buyers from key export destinations was much needed in the sector’s development. The project was in sync with the ongoing efforts lead by the Government to develop the IT/ITES sector and strongly aligned with the mandate and strategic priorities of the ITC.

148. In project appraisal, the project selected the IT/ITES sector for intervention in Bangladesh, by considering the importance of improvement in technology-based non-agricultural exports and its contribution to sustained growth and poverty reduction. It should be noted that the project made necessary adjustments in identifying motivated beneficiary companies to ensure the project effectiveness. Due to a lack of active participation, 8 companies were removed and replaced with newly selected companies who met the selection criteria. By undertaking this strict action, the Project succeeded in creating a stimulating effect among beneficiary companies.

149. Effectiveness. The evaluation concluded that the project has shown exemplary performance in reaching the target set for outputs in the Results Framework. In terms of
outcome I. Building commercial relationships between local ICT companies and foreign clients, the Project led to 192 new contacts whereas the target was to create only 30 new business contacts. Although some beneficiary companies faced difficulties in sustaining the business connections, in recent years there have been more and more deals secured and consequently, contributed towards building the country’s IT/ITES export sector. Regarding the outcome II on Building TSI capacity to provide B2B linkages, BASIS’s capacity has improved significantly in the past years, especially in arranging B2B events and matchmaking.

150. Gender equality and women’s empowerment. The NTF II did give special attention to women-led IT companies during the selection process and a few of them were selected as beneficiary companies; and a greater number of female participation is also being witnessed. Historically, there has been limited participation of women in IT workforce - 13 percent of the IT workforce is women and only 1 percent of IT/ITES companies are led by women. Cultural boundary is often mentioned as a substantial challenge for women’s participation in IT industry. During the selection of the beneficiary companies, a particular attention was given to companies with women leadership and companies that adopted a female-sensitive and family-acceptance work environment for its employees. According to the survey conducted by the evaluation, the beneficiary companies reported a positive contribution from the Project. The total number of female employees in the sample beneficiary companies increased from 61 to 159 and about 40 new female employees were hired as direct outcome of the Project.

151. Innovation. The NTF II Bangladesh project design is considered as highly innovative. In the context of Bangladesh, the B2B concept was very innovative for the IT/ITES sector export. The bottom-up approach in helping the micro and small IT/ITES companies to connect directly with foreign buyers was an innovative way to realize their export potential. It is often seen that development agencies try to intervene primarily at the policy level of developing countries expecting a trickle-down effect. NTF II ensured that the project services directly served the end beneficiaries and their capacity to export. While undertaking the assignments supported by the project, the beneficiary companies were heavily engaged in providing innovative solutions to their foreign clients, and many of whom were first-time clients. Thereby, this project’s contribution towards innovation was seen at all levels and is commendable.
Recommendations

Part I. Recommendations generated from the Uganda project

153. Based on analysis and findings of NTF II Uganda Project, one strategic recommendation is provided to CBI and ITC on proposing a strategic partnership with the Government in implementing the National Coffee Policy and Strategy in 2016-2020. The evaluation also provides a set of technical recommendations which could be relevant to similar operations of CBI and ITC in coffee sector either in Uganda or in other countries.

i. **Strategic recommendation: propose a strategic partnership with the Government to support the implementation of national coffee policy and strategy 2016-2020**

   Responsible persons/units for implementation: ITC’s Sector Competitiveness Section/DMD (responsible for the NTF Programme) and Office for Africa/DCP, the counterpart at CBI.

154. **Partnership with the Government.** Facing the great demand for international marketing support in coffee sector, the NTF programme, based on the strengths of CBI and ITC, is well positioned to offer continued and upgraded technical support, which should be implemented under a strategic partnership with the Government. This strategic partnership should focus on matching the demands of Government and the comparative advantage of CBI and ITC, so that the project efforts will be well integrated in the implementation of national development plan 2016-2020.

155. **Scaling up collective marketing of coffee producers.** The collective marketing approach led by NUCAFE was effective in increasing incomes of small producers, and it should be scaled up in broader regions. In the process of connecting Uganda with international coffee value chains ITC’s continuous support is important for NUCAFE and small producers to secure a decent share in the value chain. In this regard, the future project should continue focusing on addressing the demands of smallholder farmers, as experienced in NTF II, so that the improvement in household income could be prioritized and well monitored by the project, in line with ITC’s development goals and the Uganda national development plan.

Technical recommendations for similar operations in coffee sector in Uganda or in other countries

   Responsible persons/units for implementation: Sector Competitiveness Section/DMD

ii. **Assess and enhance in-country coordination to ensure the commitment of partners in coffee export**

156. To enhance the commitment of in-country partners, the future stakeholder analysis, during project appraisal and design stage, should consider the strategic fit of each key implementation partner in a sector-wide export strategy. Accordingly, the in-country coordination arrangement should be reviewed during the implementation process, to ensure the coordination among key implementation partners is effective.
iii. **Expand partnership with the private sector TISIs in the coffee value chain**

157. As experienced by NTF II, in value chain sector development, motivated private sector TISIs (like NUCAFE) have the strengths of close connection with small producers, be it national or local player in the sector. On the one hand, they not only provide traditional services (such as information and coaching) but also play an active role on their behalf (such as marketing and selling) and on the other hand, they also take particular care in the redistribution to small producers of the wealth generated through the development of the value chain. In promoting coffee export, the private sector TISIs often need external support in the areas of connecting to international value chains, policy advocacy, improving quality standards, and securing price premiums. Therefore, it is critical in project design to emphasize a strong partnership with motivated private sector TISIs.

iv. **Replicating and scaling up collective marketing in coffee export with other partners**

158. There is significant space for promoting collective marketing among smallholder growers, which will necessitate a concrete replicating and scaling up plan through cooperation with government and private sector partners that work with smallholder producers in collective marketing. In this perspective, it is important to include a replicating and scaling up plan and related activities in the future project design, so that the benefits and approach demonstrated by the project could be replicated and scaled up by others.

**Part II. Recommendations generated from the NTF II Bangladesh project**

159. Based on the analysis and findings of the NTF II Bangladesh project, the evaluation provides recommendations which could be relevant to future operations IT/ITES sector in Bangladesh or in another country

   Responsible persons/units for implementation: Trade Support Institution Strengthening Section/DBIS (on IT/ITES sector) and Sector Competitiveness Section/DMD (responsible for the NTF Programme)

v. **In a dynamic IT/ITES marketing environment, continue the decentralized decision making approach** where project managers have the responsibility to make necessary adjustment based on emerging trends, and set up corrective and supporting measures for beneficiary companies to ensure effective participation. This sort of participation and accountability measures will ensure the relevance of ongoing activities and encourage improvement in the performance of the beneficiary companies

vi. **Coordinate with other development partners active in the IT/ITES industry and establish focal points to ensure improved collaboration**

160. To ensure collaboration with major donors and partners and to avoid duplication of efforts, future projects should coordinate closely with and complement a number of other on-going donor-funded activities in the sector. Also while undertaking the project
appraisal and consequently when preparing the annual work plan, the project management should identify the areas of collaboration and partnership.

vii. **Recognize the diversity among the beneficiary companies and provide customized solutions to a cluster of companies**

161. In clustering the clients, TSIs should be encouraged to undertake regular assessment to ensure that the project solutions are aligned and well integrated with the national strategy, such as the Digital Bangladesh initiative.

viii. **Design project components or events specifically for women entrepreneurs** and institutionalize a platform in which they are able to discuss challenges faced in IT/ITES sector and to collectively voice out their opinions

162. As seen the improved gender mainstreaming in NTF III design, future projects should consider providing recognitions to women who have shown exemplary performance in the IT/ITES sector and showcase their achievements at the national and international level.

xvii). Correspondences and Memos related to NTF II
xviii). Content on ITC’s NTF II website
xix). Annual Reports of BASIS
Annex II: Impact assessment design and sampling methods, Uganda Project (unedited)

i. Impact assessment design

1. In the Uganda evaluation, to ascertain long term impact, a mixed evaluation design was adopted, which entailed adopting a before-and-after comparison design, a with-and-without comparison design, and one-shot study design. These designs are described Annex III.

2. The before-and-after project design involved determining the magnitude and direction of benefits (impacts/effects on) to beneficiary TSIs and coffee farmer households. The performance indicators as defined in the project log frame were used to measure the magnitude and direction of benefits by comparing the status of the indicator at the start of the programme (baseline or immediately thereafter depending on data availability) and the status of the indicator during the evaluation. Evidence was sought to confirm attribution of the reported changes to the NTF II project interventions.

3. The with-and-without evaluation design involved comparison of beneficiary and non-beneficiary coffee farmer associations and individual coffee farmer households along the key indicators identified in the project log frame. Non-beneficiary coffee farmer associations and individual coffee farmer households were either members of NUCAFE who were not direct beneficiaries of NTF II or any other farmer association within the areas of NUCAFE operations.

4. The one-shot evaluation design was applied to the assessment of issues which do not require comparison with the situation before the project inception. These issues include; sustainability, ownership, relevance and some elements of efficiency and effectiveness. The reference point was sound management practices and programming standards. Participatory impact assessment activities were used to guide this approach and identified pockets of success for follow-up and documentation.

ii. Sampling Techniques and Process

1.1 Sample size:

5. The NTF II interventions targeted 71 out of the 141 member farmer associations of NUCAFE. Assuming an average of 520 members per association, the number of beneficiary coffee farmers should be about 36,920(N). With a +/-5 per cent margin of error, the sample size (n) is around 398 farmers, calculated by the formula below,

\[ n = \frac{N}{1+N\times e^2} \]

Where n=sample size,

N=total number of target household beneficiaries for the program area (36,920)

e = the margin of error=5 per cent,

These farmers are uniformly selected from 12 selected farmer associations. Accordingly, 33 farmers are sampled each farm association.

1.2 Sample methods:

6. A two-stage stratified sampling method was used in Uganda. As the NUCAFE and the project implementation was structured around farmer associations which were located in four different coffee growing regions of Uganda--Central, South Western, Eastern and West Nile regions, these 12 associations were evenly drawn from the four regions to assure the representativeness of the sampled farmers.
7. At the first stage, 12 farmer associations were selected, with 2 beneficiary farmer associations and one non-beneficiary farmer association each region. Two beneficiary farmer associations in each region were selected by simple random sampling, while the only non-beneficiary farmer association of each region was identified and selected purposively to participate in the evaluation.

8. At the second stage, 33 individual coffee farmers were selected by systematic sampling to participate in the evaluation from each selected farmer association.

1.3 Sampling process:
9. At the first stage of sampling, all the beneficiary farmer associations of each region were listed, with a number assigned to each of them. Using the list, two farmer associations were randomly selected without replacement from each region.

10. At the second stage, the sampling of coffee farmers in each selected farmer associations started from listing all the members of the selected farmer association, and then a sampling interval (k) was computed by dividing the total number of farmers of this association by 33. After that, a number between 1 and 33 was randomly selected as the random starting point, and the corresponding farmer on the list became the first selected farmer. Thereafter, every k\textsuperscript{th} farmer was sampled until the desired 33 farmers were selected.

1.4 Characteristics of Coffee Farmer Respondents
11. The evaluation actually covered 398 coffee farmers from all the four coffee growing regions of Uganda. These were 98 farmers (24.65 per cent) from Zombo district in West Nile region; 99 farmers (24.9 per cent) from Sheema district in Western region; 67 farmers (16.8 per cent) and 33 farmers (8.3 per cent) from Masaka and Lwengo districts respectively in Central region; 67 farmers (16.8 per cent) and 34 farmers (8.5 per cent) from Mbale and Kapchorwa respectively in Eastern region.

12. The actual properly filled questionnaires returned per association were: Kkingo Coffee Farmers Association (33), Kyanamuka Coffee Farmers Association (34), Kisenyi UGACOF (33), Bufumbo Organics Coffee Farmers (38), Kabeywa Ltd Coffee farmer Association (34), Peace Kawomera Coffee Farmers Association (34), Jangokoro Coffee Farmers’ Association (33), Paidha Coffee Farmers Association (32), Mutiti Coffee Farmer association (33), Kagango Coffee Farmers Association (34), Kyangyenyi Coffee Farmers Association (33) and Banyankole Coffee service ltd (32).

13. Of the 398 farmers, 266 farmers (66.8 per cent) were from NTF II beneficiary coffee farmer associations (NUCAFE members). These were Bufumbo Organics Coffee Farmers (8.3 per cent), Kabeywa Ltd Coffee farmer Association (8.5 per cent), Kyanamuka Coffee farmers Association (8.5 per cent), Kkingo Coffee Farmers Association (8.3 per cent), Kagango Coffee Farmers Association (8.5 per cent), Kyangyenyi Coffee Farmers Association (8.3 per cent), Jangokoro Coffee Farmers’ Association (8.3 per cent) and Paidha Coffee Farmers Association (8 per cent). While 132 farmers (33.2 per cent), were from non-beneficiary coffee farmer associations. These were Banyankole Coffee service ltd (8 per cent), Kisenyi UGACOF (8.3 per cent), Mutiti Coffee Farmer association (8.3 per cent) and Peace Kawomera Coffee Farmers Association (8.5 per cent).

14. Of the sampled farmers, 281 (70.6 per cent) were male and 117 (29.4 per cent) were female. In terms of education level, 8.8 per cent never attended school, 22.6 per cent never completed primary education, 39.7 per cent completed primary level but did not complete secondary education, 18.6 per cent completed secondary education and only 10.3 per cent had attended post-secondary education (tertiary and university). The average age of the coffee farmers was 52 years with a minimum and maximum of 21 and 96 respectively. The average household size was 7 people with a minimum and maximum of 1 and 25 persons respectively.

15. Most of the respondents (90.9 per cent) reported Agriculture/Crop farming as the main economic activity/source of income for their households. Other main sources of income reported were Petty trade/Small business/Selling in the market (2.8 per cent), Salaried/wage employment (3 per cent) and animal rearing/sell of livestock and products (2.8 per cent). Of the farmers who reported Crop farming as their main source of income, they also reported that coffee contributed an average of 57 per cent of their annual income, with a minimum and maximum of 10 per cent and 100 per cent respectively. Earnings from coffee are therefore a main source of livelihood for the coffee farming community in Uganda.

![Main source of income chart]

1.5 Qualitative Sample

16. A qualitative sample of stakeholders knowledgeable about the coffee sub-sector comprised of 11 focus group discussions (FGDs) with Coffee Farmer Associations leadership and management, 6 FGDs with individual coffee farmers, and 14 key informant interviews (KIIs) with stakeholders including TSI staff, coffee trade associations, development partners, and Government officials. Both participants in FGDs and key informant interviews were purposively selected on the basis of their resourcefulness and role in project implementation.
Annex III: Results chain of NTF II Uganda Project (unedited)

Impact
The creation of sustainable exporter competitiveness in coffee sector in

Increase of the coffee farmer's participation in the value chain
Increase of the volume and value of exports to the EU market

Outcomes
Trade Support Institutions (TSIs) become more effective in providing sector development support services to SMEs along the
SMEs improve their export competitiveness sustainably based on the support provided by TSIs.

Outputs
Enhanced the capacity of umbrella
Enhanced the capacity of NUCAFE and UEPB
Enhanced business capabilities of FAs

Activities
- Design and adopt an evaluation policy, and construct a framework that would ensure the independence, credibility and relevance of the evaluation function in UEPB and UCDA.
- Upgrade the knowledge and skills of M&E officers at UCDA and UEPB
- Review and update the NES for coffee
- Strengthen institutional capacity and internal systems by conducting an institutional audit and support implementation of institutional reforms, conducting a survey of farmer associations, preparing a business plan for NUCAFE, and undertaking capacity building and training of NUCAFE
- Enhance business management competencies in the field by undertaking a portfolio services

- Improving knowledge and skills in coffee marketing
- Implementation of coffee traceability and certification schemes
- Developing of market linkages for coffee exports
- Improving access to finance for coffee sector value chain actors

Data collection tools-Uganda

Coffee Farmer and FA data collection tools Bangladesh

Evaluation questions and Data Collection Tools-Bangladesh

Annex V: ITC’s evaluation rating system and evaluation criteria

(Excerpt from ITC Evaluation Guidelines 2016, draft)

1. A 6-point rating system is applied at ITC evaluations covering independent evaluations, self-evaluations and project completion reports (as a form of self-evaluation). In evaluation reports, evaluators provide a justification for each rating. In evaluation reports, a rating will be assigned to each evaluation criterion, and a composite rating for overall performance and results will be provided based on the consideration of the individual ratings. All ratings should be a round number, with no decimal points.

2. The rating for each given criterion is based on the considerations for different elements of the criterion, as elaborated in the evaluation matrix. For example, the rating for Relevance should be based on balanced considerations for its relevance to ITC’s strategic objectives, relevance to the needs of clients (e.g. policy makers, TSIs, SMEs, other beneficiaries), coherence and clarity of the design, etc. The effectiveness rating may be based on overall assessments for the achievement of each of the project intermediate outcome and impact. The Efficiency rating may be based on assessments for overall financial performance, output quality, cost-effectiveness, and timeliness of outputs and outcomes.

Table: Ratings for evaluation

<table>
<thead>
<tr>
<th>Rating</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>6 Highly satisfactory</td>
<td>A project with overwhelming positive results, and no flaws.</td>
</tr>
<tr>
<td>5 Satisfactory</td>
<td>A project with some strong results, and without material shortcomings.</td>
</tr>
<tr>
<td>4 Moderately satisfactory</td>
<td>A project with a clear preponderance of positive results (i.e., it may exhibit some minor shortcomings though these should be clearly outweighed by positive aspects).</td>
</tr>
<tr>
<td>3 Moderately unsatisfactory</td>
<td>A project with either minor shortcomings across the board, or an egregious shortcoming in one area that outweighs other generally positive results.</td>
</tr>
<tr>
<td>2 Unsatisfactory</td>
<td>A project with largely negative results, clearly outweighing positive results.</td>
</tr>
</tbody>
</table>
3. It should be noted that the rating for overall performance and results should not be an arithmetic average of the individual ratings. Appropriate weight for different evaluation criteria may be deliberated and applied in line with the focus of the operations and the operational context. An example rating table is provided below.

4. In rating practice, it is necessary to check the consistency among ratings on different criteria.

5. **Evaluation Criteria.** As indicated in the Evaluation Policy 2015, the evaluation criteria applied at ITC are consistent with the OECD-DAC evaluation criteria and the UNEG Norms and Standards. ITC applies the criteria of relevance, effectiveness, efficiency, impact, and sustainability in evaluations. ITC adopted in 2014 two new evaluation criteria: gender equality and women’s empowerment, and innovation, replication and scaling up. In addition, when applicable, the considerations on environment, climate change, and human rights may be applied in certain evaluations.

6. The definitions of the evaluation criteria, which are adapted to ITC’s operational context, are provided below:

   - **Relevance.** It is to assess the consistency of the objectives of an intervention with ITC’s corporate goals and comparative advantages, the client country’s development strategy or policy priorities, and the needs of beneficiaries. The adequacy and coherence of the components of the intervention and the related strategy to achieve those objectives should be assessed as well.\(^\text{20}\)
   
   - **Effectiveness.** It is to assess that to what extent the intervention’s objectives were achieved, or are expected to be achieved, taking into account their relative importance.
   
   - **Efficiency.** It is to assess that to what extent the intervention has converted its resources and inputs (funds, expertise, time, etc.) economically into results.\(^\text{21}\)
   
   - **Impact.** It is to measure changes that have occurred or are expected to occur upon the partners and beneficiaries, and to indicate the positive or negative, direct or indirect, intended or unintended medium- to long term results, caused by the interventions.\(^\text{22}\) The impact domains aligned to UN 2030 SDGs will be considered in assessing impact.
   
   - **Sustainability.** It is to assess the likelihood of continued long term benefits of the interventions and the resilience to risk of net benefit flows over time.

\(^{19}\) OECD-DAC Glossary of Key Terms in Evaluation and Results-Based Management  
\(^{20}\) ECG, Good Practice Standards for the Evaluation of Public Sector Operations, 2012 Revised Edition  
\(^{21}\) The concept of value for money could be largely covered by assessing the efficiency, effectiveness of and impact of the intervention.  
\(^{22}\) IFAD, Evaluation Manual, 2015 edition
- **Gender equality and women’s empowerment.** It is to assess whether gender equality and women’s empowerment are sufficiently embedded in the interventions, and the extent to which interventions have contributed to better gender equality and women’s empowerment through interventions.

- **Innovation, replication and scaling up.** It is to assess to what extent the intervention has introduced innovative approaches to achieve ITC’s goals or to better adapt to emerging contexts, and the innovations have been replicated or scaled up by development partners.

- **Consideration on environment and climate change.** It is to assess, in the trade development context, to what extent the interventions have contributed to protection and rehabilitation of natural resources and the environment and to climate adaptation and resilience.

- **Consideration on human rights.** It is to assess, in the trade development context, whether and to what extent the ITC interventions have contributed to the promotion and protection of human rights, among others including labor rights, through trade development.
