The National Information Technology Authority (NITA) of Uganda is keen to ensure sustainable development in Uganda through strategic and tactical support to the IT and IT Enabled Services sectors through Business Process Outsourcing (BPO).

With the setup of Industry specific supporting infrastructure like the IT Parks, Software Incubation Centers across the country, coupled with a well networked fibre-optic backbone network access to Internet is now guaranteed.

ITC presents a complimentary opportunity through providing technical assistance to our SME’s and start-ups.

On behalf of Government of Uganda and on behalf of National Information Technology Authority – Uganda (NITA-U) and on behalf of all NTF IV implementing partners, I encourage the SME’s and start-ups to embrace this project.

For more information: www.nita.go.ug

The ICT Association of Uganda is a multi-stakeholder initiative formed by private individuals from Uganda, with the vision of providing professional guidance to individuals and organizations in the private sector, as well as offering advisory services to government on policy-based issues.

The primary goal of the ICT Association of Uganda will be to extend the reach and benefits of the use of ICTs to all sectors and facets of Uganda through professionalism.

The ICT Association of Uganda seeks to become the foremost and largest forum for ICT practitioners, managers, researchers and policy makers to share their knowledge and experience on the technology, adoption, localization, management and policy of development informatics in Uganda.

The Alliance for Trade in Information-Technology and Services (ATIS) is a Trade & Investment Support Institution (TISI) based in Uganda and focuses on the non-traditional services development and export. The current coverage includes Information Technology (IT) products and services as well as all other IT Enabled Services (ITES).

The ATIS mission is a commitment to its members to organize and give them access to international and public sector markets. The ATIS will facilitate the members to become more competitive in the International market by facilitating information, capacity building, partnership and trade. Member companies will be modelled, facilitated and synchronized to enable them to win, and execute and manage international contracts both as a team and as individual companies.

WHO ARE WE?

CBI (Centre for the Promotion of Imports from developing countries) is part of the Netherlands Enterprise Agency, funded by the Dutch Ministry of Foreign Affairs. The mission of CBI is to connect Small and Medium Sized Enterprises (SMEs) in developing countries and thereby contribute to sustainable and inclusive economic growth.

WHAT DO WE DO?

The CBI’s mission is to contribute to sustainable economic development in developing countries through the expansion of exports from these countries. Over the last 40 years, we have opened the doors of European trade to thousands of exporters in developing countries.

Our role as a knowledge broker is characterised by us working closely with our network. We offer and work with an integrated approach to sustainable economic development.

Furthermore, all of our programmes are based on CSR. The focus of the CBI is on an important link in the export value chain. We offer an integrated, needs-driven approach to both exporters as well as their business support organisations (BSOs) and governmental authorities.

We focus on the link between producing exporters and European buyers. We contribute to strengthening the competitive position of exporters sustainably, assisting them in trading on the European markets.

The International Trade Centre (ITC) is the joint agency of the World Trade Organization and the United Nations. It is the only development agency that is fully dedicated to supporting the internationalization of small and medium-sized enterprises (SMEs).

This means that the agency enables SMEs in developing and transition economies to become more competitive and connect to international markets for trade and investment, thus raising incomes and creating job opportunities, especially for women, young people, and poor communities.

ITC works closely with governments as well as institutional and private sector partners in developing countries across its six focus areas:

1. Providing Trade and Market Intelligence.
5. Promoting and Mainstreaming Inclusive and Green Trade.
6. Supporting Regional Economic Integration and South-South Links.

ITC mission is to foster inclusive and sustainable economic development, and contribute to achieving the United Nations Global Goals for Sustainable Development. ITC works towards creating ‘trade impact for good’.

NETHERLANDS TRUST FUND IV PROGRAMME

The Netherlands Trust Fund IV Programme (NTF IV) is a partnership between ITC and the Ministry for Foreign Affairs of The Netherlands, which was signed in September 2017 in close collaboration with the Dutch Centre for the Promotion of Imports from Developing Countries (CBI).

NTF IV aims to enhance export competitiveness of selected sectors in selected countries through an integrated approach to sector competitiveness built around one outcome – generation of export revenues - and the four following intermediate outcomes:

1. Validated plan for sector and enterprise development in place.
2. Export capacity of male and female-owned SMEs increased sustainably.
3. Capacity of trade & investment support institutions improved in providing sector development support services to SMEs along the sector value chain.

The projects under the programme are:

1. Senegal: Development of the IT and IT-Enabled Services (ITES) sector
2. Uganda: development of the IT and IT-Enabled Services (ITES) sector.
3. Myanmar: Consolidation of Kayah state tourism and extension to Tanintharyi.
4. Mano River: Value chain development of cocoa and associated crops

ZIMBA WOMEN
Mobile services and applications development, Website Design
The Ugandan economy is largely based on agriculture with the sector employing about two-thirds of the workforce in the country and representing the main export earner. However, with an increasing number of educated youth - 700,000 graduating every year (but only a fraction in IT) - the ICT sector is becoming a promising area to foster the potential for gainful employment thanks to existing opportunities in the domestic and export markets for IT and IT Enabled Services (ITES).

Mainly due to the expansion of the telecommunications segment, the ICT sector growth is estimated at 20% annually: mobile subscriptions now stand at 22.4 million active subscribers and customers of mobile money services are 23 million, generating a total amount of 340.6 million transactions valued at 18.13 trillion Ugandan Shillings.

By 2014, the mobile operator MTN Uganda was positioned as the top taxpayer closely followed by Airtel (third). But the IT sector, in particular, is much smaller: few Ugandan IT and BPO companies are exporting and Uganda is not listed by any of the major related rankings established by AT Kearney, Gartner and Tholons. A recent report from Tholons does not mention Uganda as an outsourcing destination among their top 100 locations. Nevertheless, Uganda appears to be one of the top 10 low-income countries with the highest share of services exports deriving from the ICT sector.

The sector is on the Government’s priority list and support to it is increasing: according to the Ministerial Policy Statement for the Ministry of ICT and National Guidance for the fiscal year 2018/19, the sector is covered by the Second National Development Plan (NDPII) 2015/16 – 2019/20 and the Sector Investment Plan. In line with these plans, the ministry has already made significant strides towards Uganda’s Digital Vision, aligning policies to improve the country’s ICT rankings and attract investments.

Through the National ICT Innovation Support Programme (NIISP), the Ministry is supporting innovators to develop products and services that are viable for the market. These initiatives are targeted at creating employment for an extremely large young population.

There is already a relatively well-structured ecosystem in place for the ICT sector to expand in the country. Government, related organisations such as NITA-U (National Information Technology Authority-Uganda), UIA (Uganda Investment Authority) and UEPB (Uganda Export Promotion Board) are working with private sector organisations such as PSFU (Private Sector Foundation Uganda), Makerere University, industry associations, ICTAU (ICT Association of Uganda) and ATIS (Alliance for Trade in Information Technology and Services), as well as incubators like Innovation Village, Hive Colab, Outbox and others, to support IT and ITES service providers.

SMEs in Uganda currently employ over 2.5 million people, which represents 90% of the entire private sector and contribute to 80% of the output from manufacturing. When looking at the IT and ITES employment records and revenue contributions from an SME perspective, it is difficult to determine specific figures as there are no baseline data available for monitoring purposes.

The NITA-U initiative to register and certify all companies in the sector has so far led to the certification of 207 companies. 90% of them are SMEs that contribute to less than 15% in terms of revenue creation. Approximately, 10% of the companies with the highest revenue include hardware suppliers and computer networking firms.
3D SERVICES LIMITED

CEO: TIM MWANDHA

We have been in the business of tracking people, vehicles and goods in transit since 2010. We are experts in car tracking, fleet management, fuel monitoring and field staff surveillance. **LEGAL STATUS:**

Private Ltd
At Vouch Digital we are building a verified digital platform that simplifies the distribution / disbursement of aid and donations to program participants across the world. Many local institutions cannot keep track of how cash is used.

Issues around aid dollar leakage have weakened confidence in the aid system on both sides and have led to a search for alternatives to traditional distribution mechanisms. Making aid both more transparent and less prone to waste requires accessible digital solutions which remove from the distribution process traditional intermediaries who do not add, but rather subtract, value.

The Vouch platform increases transparency within aid distribution by creating a traceable digital paper trail and by cutting down on intermediaries which reduce aid amounts.
Zeenode Ltd. is a software firm founded by 6 engineers in 2011 focusing on the development and management of Cloud Based Information Management System for educational institutions.

The company provides software development services geared towards integration with third party information systems, large Database processing, Cloud services, Smart card biometric identification system.
