Web developer consultant

Project Title: Trade and Market Intelligence IT

Assignment title: Consultant: Web Developer

Background:

The Trade and Market Intelligence section is managing a suite of websites called suite ITC's Market Analysis Tools. The section is involved in several projects and has therefore a permanent need to innovate with new IT tools or with new features in the existing tools to better meet the donors' demands.

In this context, the consultant will work on the ITC Tools, to accommodate the changes and implement new features, in collaboration with the lead developer of the tools. The consultant will also take part on new IT projects managed by the section.

Duties & Responsibilities:

Under the overall guidance of the Trade and Market Intelligence section's Lead Web Developer, the consultant will:

- Gather and analyze business requirements
- Provide estimates for development work
- Implement new features in existing or in currently-in-development applications
- Perform bug fixing and maintenance of existing applications
- Perform application testing
- Write documentation and reports

Qualifications, Competencies and experience required:

- Advanced University degree in Engineering Science / Information Technology
- At least 2 years relevant work experience in web development
- Extensive knowledge in ASP.NET Framework, .NET Core, C#
- Good understanding of responsive website design
- Good understanding in using Microsoft SQL Server database and the T-SQL language

Language requirements:

Excellent knowledge of English or French. Knowledge of another official UN language is an asset.

Period of assignment:

Minimum 1 year and extension is subject to funds availability.
